Communications, Radar and Electronic Warfare Adrian Graham, 2011-01-04 A practical guide to the principles of radio communications for both civilian and military applications In this book the author covers both the civilian and military uses of technology focusing particularly on the applications of radio propagation and prediction Divided into two parts the author introduces the basic theory of radio prediction before providing a step by step explanation of how this theory can be translated into real life applications In addition the book presents up to date systems and methods to illustrate how these applications work in practice This includes systems working in the HF bands and SHF Furthermore the author examines the performance of these systems and also the effects of noise interference and deliberate jamming as well as the performance of jamming detection and intercept systems Particular attention is paid to the problems caused by Radio Controlled Improvised Explosive Devices RCIEDs Key Features A practical handbook on the topic of radio communications and propagation Written by an expert in both the civilian and military applications of the technology Focuses on methods such as radio and radar jamming and radio controlled improvised explosive devices IEDs Contains problems and solutions to clarify key topics

NRL Review ,2000 *Detecting and Classifying Low Probability of Intercept Radar* Phillip E. Pace, 2009 This comprehensive book presents LPI radar design essentials including ambiguity analysis of LPI waveforms FMCW radar and phase shift and frequency shift keying techniques Moreover you find details on new OTHR modulation schemes noise radar and spatial multiple input multiple output MIMO systems The book explores autonomous non linear classification signal processing algorithms for identifying LPI modulations It also demonstrates four intercept receiver signal processing techniques for LPI radar detection that helps you determine which time frequency bi frequency technique best suits any LPI modulation of interest Publisher *Parabolic Equation Methods for Electromagnetic Wave Propagation* Mireille Levy, 2000

Provides scientists and engineers with a tool for accurate assessment of diffraction and ducting on radio and radar systems The author gives the mathematical background to parabolic equations modeling and describes simple parabolic equation algorithms before progressing to more advanced topics such as domain truncation the treatment of impedance boundaries and the implementation of very fast hybrid methods combining ray tracing and parabolic equation techniques The last three chapters are devoted to scattering problems with application to propagation in urban environments and to radar cross section computation Annotation copyrighted by Book News Inc Portland OR

Crowd Dynamics, Volume 1 Livio Gibelli, Nicola Bellomo, 2019-01-22 This volume explores the complex problems that arise in the modeling and simulation of crowd dynamics in order to present the state of the art of this emerging field and contribute to future research activities Experts in various areas apply their unique perspectives to specific aspects of crowd dynamics covering the topic from multiple angles These include a demonstration of how virtual reality may solve dilemmas in collecting empirical data a detailed study on pedestrian movement in smoke filled environments a presentation of one dimensional conservation laws with point constraints on the flux a collection of new ideas on the modeling of crowd dynamics at the microscopic scale and others Applied mathematicians interested in crowd dynamics pedestrian movement traffic flow modeling urban planning and other topics will find this volume a valuable resource Additionally researchers in social psychology architecture and engineering may find this information relevant to their work

Assessment of Total Evacuation Systems for Tall Buildings Enrico Ronchi, Daniel Nilsson, 2014-05-27 This SpringerBrief focuses on the use of egress models to assess the optimal strategy for total evacuation in high rise buildings It investigates occupant relocation and evacuation strategies involving the exit stairs elevators sky bridges and combinations thereof Chapters review existing information on this topic and describe case study simulations of a multi component exit strategy This review provides the architectural design regulatory and research communities with a thorough understanding of the current and emerging evacuation procedures and possible future options A model case study simulates seven possible strategies for the total evacuation of two identical twin towers linked with two sky bridges at different heights The authors present the layout of the building and the available egress components including both vertical

and horizontal egress components namely stairs occupant evacuation elevators OEEs service elevators transfer floors and sky bridges The evacuation strategies employ a continuous spatial representation evacuation model Pathfinder and are cross validated by a fine network model STEPS Assessment of Total Evacuation Systems for Tall Buildings is intended for practitioners as a tool for analyzing evacuation methods and efficient exit strategies Researchers working in architecture and fire safety will also find the book valuable
