Architectural Photography Construction And Design Manual:

Architectural Photography, 2012 **Research Methods for Architecture** Ray Lucas, Raymond Lucas, 2016-01-18

While fundamentally a design discipline architectural education requires an element of history and theory grouped under the term research. However many students struggle with this part of their course. This practical handbook provides the necessary grounding in this subject addressing essential questions about what research in architecture can be. The first part of the book is a general guide to the fundamentals of how to do research from assembling a literature review to conducting an interview. The second section presents a selection of case studies dealing with such topics as environmental psychology the politics of space ethnographic research and mapping.

Architectural Photography and Composition Steven Brooke, 2020-04-15 A complete guide to the history practice and techniques of depicting architecture interiors and landscape and the applications for digital photography. With over 300 illustrations and workflows this book is the most complete guide to architectural photography ever produced. The author Steven Brooke is an internationally recognized leader in the field of architectural photography. He is the photographer of over 40 books on architecture on the faculty of the University of Miami School of Architecture and winner of the Rome Prize from the American Academy in Rome and the National American Institute of Architects Honor Award in Photography. Point of View E. Abraben, 1994 A text addressing the special and often subtle technical demands of architectural photography. Using numerous example photographs the author provides step by step instructions on achieving specific photographic effects from basic composition rules to color compensation. Emanuel M. Abraben, Phyllis Gold Josloff, 1993 Handbook for the Construction Industry - Michigan Society of Architects Michigan Society of Architects, 1981 **Old & New** Frank Peter Jäger, 2012-11-05 Most of the buildings that will be needed

in Europe in the coming decades have long since been built. The building tasks of the future lie in the skillful reuse and transformation of existing building stock whether it be the redevelopment of historic city centers the building of extensions onto residential structures the expansion of public buildings or the redevelopment of entire factory areas. Building in the existing fabric calls for highly specific approaches in planning construction and implementation. It spans a broad range of building tasks from working within the guidelines of historic preservation and renovating carefully and cautiously all the way to the complete transformation of what exists. In addition to aesthetic transformation technical aspects such as improving energy efficiency and working with contaminated building materials also play an important role. This book provides a comprehensive overview of architectonic strategies of continuing to build. It presents intelligent ideas and approaches for working with existing building stock and divides them into three categories according to the method selected: addition

transformation and reuse Presented in this volume are everyday projects such as the revitalizing of structures from the 1950s to the 1970s for example the renovation of Siedlung Heuried in Zurich by Adrian Streich Architekten but also more specialized examples such as the open air library made of elements recycled from the facade of a department store in Magdeburg Salbke by Karo Architekten Interviews with experts provide helpful background information on selected topics
