How to Succeed in Geometry, Grades 5-8 Charles Shields, 2000-10 **Rational Numbers to Linear Equations** Hung-Hsi Wu, 2020-06-18 This is the first of three volumes that together give an exposition

of the mathematics of grades 9-12 that is simultaneously mathematically correct and grade level appropriate. The volumes are consistent with CCSSM Common Core State Standards for Mathematics and aim at presenting the mathematics of K-12 as a totally transparent subject. The present volume begins with fractions then rational numbers then introductory geometry that can make sense of the slope of a line then an explanation of the correct use of symbols that makes sense of variables and finally a systematic treatment of linear equations that explains why the graph of a linear equation in two variables is a straight line and why the usual solution method for simultaneous linear equations by substitutions is correct. This book should be useful for current and future teachers of K-12 mathematics as well as for some high school students and for education professionals.
