Arguments From Ignorance Arguments From Ignorance:

Arguments from Ignorance Douglas Walton, 2010-11-01 **Reasoning and Public Health: New Ways of Coping with Uncertainty** Louise Cummings, 2015-03-27 This book argues that in order to be truly effective public health must embrace a group of reasoning strategies that have traditionally been characterized as informal fallacies It will be demonstrated that these strategies can facilitate judgements about complex public health issues in contexts of uncertainty The book explains how scientists and lay people routinely resort to the use of these strategies during consideration of public health problems Although these strategies are not deductively valid they are nevertheless rationally warranted procedures Public health professionals must have a sound understanding of these cognitive strategies in order to engage the public and achieve their public health goals The book draws upon public health issues as wide ranging as infectious diseases food safety and the potential impact on human health of new technologies It examines reasoning in the context of these issues within a large scale questionnaire based survey of nearly 900 members of the public in the UK In addition several philosophical themes run throughout the book including the nature of uncertainty scientific knowledge and inquiry The complexity of many public health problems demands an approach to reasoning that cannot be accommodated satisfactorily within a general thinking skills framework This book shows that by developing an awareness of these reasoning strategies scientists and members of the public can have a more productive engagement with public health problems *Burden of Proof, Presumption and Argumentation* Douglas Walton, 2014-06-30 The notion of burden of proof and its companion notion of presumption are central to argumentation studies This book argues that we can learn a lot from how the courts have developed procedures over the years for allocating and reasoning with presumptions and burdens of proof and from how artificial intelligence has built precise formal and computational systems to represent this kind of reasoning The book provides a model of reasoning with burden of proof and presumption based on analyses of many clearly explained legal and non legal examples The model is shown to fit cases of everyday conversational argumentation as well as argumentation in legal cases Burden of proof determines 1 under what conditions an arguer is obliged to support a claim with an argument that backs it up and 2 how strong that argument needs to be to prove the claim in question *Building Arguments* Drew Hinderer, 2005-01-28 Building Arguments offers a fresh new approach to informal logic successfully combining an accessible style with a rigorous systematic treatment of argument It integrates reasoning and writing teaching readers to argue effectively and communicate ideas in persuasive prose It combines fundamental topics of critical thinking into broader discussions of reasoning So where other books may treat fallacy identification and avoidance induction and deduction and validity and soundness as ends in themselves Building Arguments presents these topics in a practical yet philosophically sound context It includes entertaining and relevant examples and exercises drawn from sports popular advertising current events and many academic areas Building Arguments is unique in its emphasis on helping readers to develop their own

persuasive arguments as well as to evaluate arguments from other sources Using a writing level and organization guided by the principles of reading development the author introduces material gradually moving from a very accessible level to a more rigorous one The result A book unique in its ability to foster philosophically based argument analysis while promoting reasoning and writing skills across the curriculum **Argument Evaluation and Evidence** Douglas Walton,2015-08-04

This monograph poses a series of key problems of evidential reasoning and argumentation It then offers solutions achieved by applying recently developed computational models of argumentation made available in artificial intelligence Each problem is posed in such a way that the solution is easily understood The book progresses from confronting these problems and offering solutions to them building a useful general method for evaluating arguments along the way It provides a hands on survey explaining to the reader how to use current argumentation methods and concepts that are increasingly being implemented in more precise ways for the application of software tools in computational argumentation systems It shows how the use of these tools and methods requires a new approach to the concepts of knowledge and explanation suitable for diverse settings such as issues of public safety and health debate legal argumentation forensic evidence science education and the use of expert opinion evidence in personal and public deliberations **Fallacies in Medicine and Health** Louise Cummings,2020-02-29

This textbook examines the ways in which arguments may be used and abused in medicine and health The central claim is that a group of arguments known as the informal fallacies including slippery slope arguments fear appeal and the argument from ignorance undertake considerable work in medical and health contexts and that they can in fact be rationally warranted ways of understanding complex topics contrary to the views of many earlier philosophers and logicians Modern medicine and healthcare require lay people to engage with increasingly complex decisions in areas such as immunization lifestyle and dietary choices and health screening Many of the so called fallacies of reasoning can also be viewed as cognitive heuristics or short cuts which help individuals make decisions in these contexts Using features such as learning objectives case studies and end of unit questions this textbook examines topical issues and debates in all areas of medicine and health including antibiotic use and resistance genetic engineering euthanasia addiction to prescription opioids and the legalization of cannabis It will be useful to students of critical thinking reasoning logic argumentation rhetoric communication health humanities philosophy and linguistics **The Price of Doubt** Nicholas Nathan,2002-11 First

Published in 2004 Routledge is an imprint of Taylor Francis an informa company **International Handbook of Thinking and Reasoning** Linden J. Ball,Valerie A. Thompson,2017-11-14 The Routledge International Handbook of Thinking and Reasoning is an authoritative reference work providing a balanced overview of current scholarship spanning the full breadth of the rapidly developing and expanding field of thinking and reasoning It contains 35 chapters written by leading international researchers covering foundational issues as well as state of the art developments in thinking and reasoning research Topics covered range across all sub areas of thinking and reasoning including deduction induction abduction

judgment decision making argumentation problem solving expertise creativity and rationality The contributors engage with cutting edge debates such as the status of dual process theories of thinking the role of unconscious intuitive emotional and metacognitive processes in thinking and the importance of probabilistic conceptualisations of thinking and reasoning Authors also examine the importance of neuroscientific findings in informing theoretical developments and explore the situated nature of thinking and reasoning across a range of real world contexts such as mathematics medicine and science The Handbook provides a clear sense of the way in which contemporary ideas are challenging traditional viewpoints as new paradigm of the psychology of reasoning emerges This paradigm shifting research is paving the way toward a richer and more inclusive understanding of thinking and reasoning where important new questions drive a forward looking research agenda It is essential reading for both established researchers in the field of thinking and reasoning as well as advanced students wishing to learn more about both the historical foundations and latest developments in this rapidly growing field

Pragmatics Louise Cummings, 2013-10-08 The first truly multidisciplinary text of its kind this book offers an original analysis of the current state of linguistic pragmatics Cummings argues that no study of pragmatics can reasonably neglect the historical and contemporary influences on this discipline of neighboring fields of inquiry particularly philosophy psychology artificial intelligence and language pathology By the same token these fields can begin to address their own questions more productively by examining the insights of pragmatics The book's range of topics and depth of analysis will be of interest to advanced undergraduate and more specialized readers in linguistics communication studies speech and language therapy and cognitive science Topics discussed include coverage of pragmatic concepts and theories criticisms of Sperber and Wilson's relevance theory Habermas's theory of communicative competence and Kasher's views on the modularity of pragmatics pragmatic deficits in a range of child and adult language disorders and a pragmatic analysis of argumentation in topical issues such as AIDS and BSE theories of meaning inferences pragmatics and AI

Argument Types and Fallacies in Legal Argumentation Thomas Bustamante, Christian Dahlman, 2015-04-07 This book provides theoretical tools for evaluating the soundness of arguments in the context of legal argumentation It deals with a number of general argument types and their particular use in legal argumentation It provides detailed analyses of argument from authority argument ad hominem argument from ignorance slippery slope argument and other general argument types Each of these argument types can be used to construct arguments that are sound as well as arguments that are unsound To evaluate an argument correctly one must be able to distinguish the sound instances of a certain argument type from its unsound instances This book promotes the development of theoretical tools for this task
