Chandler, W. Magnus, 2012-12-06 One of the pervasive phenomena in the history of science is the development of independent disciplines from the solution or attempted solutions of problems in other areas of science In the Twentieth Century the creation of specialties within the sciences has accelerated to the point where a large number of scientists in any

major branch of science cannot understand the work of a colleague in another subdiscipline of his own science Despite this fragmentation the development of techniques or solutions of problems in one area very often contribute fundamentally to solutions of problems in a seemingly unrelated field Therefore an examination of this phenomenon of the formation of independent disciplines within the sciences would contribute to the understanding of their evolution in modern times We believe that in this context the history of combinatorial group theory in the late Nineteenth Century and the Twentieth Century can be used effectively as a case study It is a reasonably well defined independent specialty and yet it is closely related to other mathematical disciplines The fact that combinatorial group theory has so far not been influenced by the practical needs of science and technology makes it possible for us to use combinatorial group theory to exhibit the role of the intellectual aspects of the development of mathematics in a clearcut manner There are other features of combinatorial group theory which appear to make it a reasonable choice as the object of a historical study

new to the discipline **Family History and Historians in Australia and New Zealand** Malcolm Allbrook, Sophie Scott-Brown, 2021-06-27 Since the turn of the twenty first century family history is the place where two great oceans of research are meeting family historians outside the academy with traditionally trained often university employed historians This collection is both a testament to dialogue and an analysis of the dynamics of recent family history that derives from the confluence of professional historians with family historians their common causes and conversations It brings together leading and emerging Australian and New Zealand scholars to consider the relationship between family history and the discipline of history and the potential of family history to extend the scope of historical inquiry even to revitalise the discipline In Anglo Western culture the roots of the discipline s professionalisation lay in efforts to reconstruct history as objective knowledge to extend its subject matter and to enlarge the scale of historical enquiry Family history almost by definition is often inescapably personal and localised How then have historians responded to this resurgence of interest in the personal and the local and how has it influenced the thought and practice of historical enquiry
