Blood And Water The Indus River Basin In Modern History:

Blood and Water David Gilmartin, 2015-06-05 The Indus basin was once an arid pastoral watershed but by the second half of the twentieth century it had become one of the world's most heavily irrigated and populated river basins. Launched under British colonial rule in the nineteenth century, this irrigation project spurred political, social, and environmental transformations that continued after the 1947 creation of the new states of India and Pakistan. In this first large-scale environmental history of the region, David Gilmartin focuses on the changes that occurred in the basin as a result of the implementation of the world's largest modern integrated irrigation system. This masterful work of scholarship explores how environmental transformation is tied to the creation of communities and nations, focusing on the intersection of politics, statecraft, and the environment.

Blood and Water David Gilmartin, 2020-04-14 The book is a history of the political and environmental transformation of the Indus basin as a result of the modern construction of the world's largest integrated irrigation system. Begun under British colonial rule in the 19th century, this transformation continued after the region was divided between two new states, India and Pakistan, in 1947. Massive irrigation works have turned an arid region into one of dense agricultural population, but its political legacies continue to shape the politics and statecraft of the region. Indus River Basin Sadiq I. Khan, Thomas E. Adams, 2019-01-12 *Indus River Basin: Water Security and Sustainability* provides a comprehensive treatment of water-related issues within the Indus River basin. Each chapter is written by an expert in the field; hence, this book serves as a single, holistic source covering the whole region, not just a single country. Many of the challenges faced by this region are trans-boundary issues, especially within the context of climate change and water scarcity. Topics covered include extreme engineering and water resource management, one of the largest irrigation systems in dry to semi-desert conditions, social sciences, population dynamics linked to water resources, and political sciences. As such, this book is relevant and important to all researchers interested in these issues. Includes detailed chapters provided by specialists in each different field, as compiled by well-experienced editors. Presents work from related fields across the Indus basin and makes them easily accessible on one single place. Shows the Indus River as a type case and shares issues relevant to other locations across the world.

Water Giulio Boccaletti, 2022-10-18 Spanning millennia and continents, a revealing history that tackles the most important story of our time: our relationship with water in a world of looming scarcity. Kelly McEvers, NPR Host. Far more than a biography of its nominal subject, the book stands as a compelling history of civilization itself. *The Wall Street Journal* Book Review: Writing with authority and brio, Giulio Boccaletti, honorary research associate at the Smith School of Enterprise and the Environment, University of Oxford, shrewdly combines environmental and social history, beginning with the earliest civilizations of sedentary farmers on the banks of the Nile, the Tigris, and the Euphrates Rivers. Even as he describes how these societies were made possible by sea level changes from the last glacial melt, he incisively examines how this type of farming led to irrigation and multiple cropping, which in turn led to a population

explosion and labor specialization We see with clarity how irrigation s structure informed social structure inventions such as the calendar sprung from agricultural necessity how in ancient Greece the communal ownership of wells laid the groundwork for democracy how the Greek and Roman experiences with water security resulted in systems of taxation and how the modern world as we know it began with a legal framework for the development of water infrastructure Extraordinary for its monumental scope and piercing insightfulness *Water A Biography* richly enlarges our understanding of our relationship to and fundamental reliance on the most elemental substance on earth

Ecology and Power in the Age of Empire Corey Ross,2017-03-31 *Ecology and Power in the Age of Empire* provides the first wide ranging environmental history of the heyday of European imperialism from the late nineteenth century to the end of the colonial era It focuses on the ecological dimensions of the explosive growth of tropical commodity production global trade and modern resource management transformations that still visibly shape our world today and how they were related to broader social cultural and political developments in Europe s colonies Covering the overseas empires of all the major European powers Corey Ross argues that tropical environments were not merely a stage on which conquest and subjugation took place but were an essential part of the colonial project profoundly shaping the imperial enterprise even as they were shaped by it The story he tells is not only about the complexities of human experience but also about people s relationship with the ecosystems in which they were themselves embedded the soil water plants and animals that were likewise a part of Europe s empire Although it shows that imperial conquest rarely represented a sudden bout of ecological devastation it nonetheless demonstrates that modern imperialism marked a decisive and largely negative milestone for the natural environment By relating the expansion of modern empire global trade and mass consumption to the momentous ecological shifts that they entailed this book provides a historical perspective on the vital nexus of social political and environmental issues that we face in the twenty first century world

An Environmental History of India Michael H. Fisher,2018-10-18 This longue dur e survey of the Indian subcontinent s environmental history reveals the complex interactions among its people and the natural world

[Two Rivers Entangled](#) Dale J. Stahl Ph.D.,2026-01-06 During the twentieth century the Tigris and Euphrates rivers underwent a profound physical transformation one that mirrored the region s political shift from imperial rule to nation state Here Iraq Syria and Turkey took shape in the wake of the Ottoman Empire and the two rivers became sites of economic development planning and large scale environmental engineering It is a modern conceit that industrial technological societies transcend ecological change that technology and ecology operate separately With this book Dale J Stahl instead centers riverine ecologies within the context of social and political projects and shows how natural processes encounter human intentions to manage control or modernize Weaving imperial and national histories with ecological ones *Two Rivers Entangled* undermines familiar accounts of the invention of states the advance of nations and the triumphs of technical expertise Stahl entangles a wide range of human and nonhuman actors knitting together the movement of engineers and bureaucrats with that of salt

particles linking the disappointment of revolutionaries to the dissolution of unreliable rock and following the flow of water over embankments and into poetry Ultimately this book offers an alternative account of twentieth century Middle Eastern history one subject as much to ecological change as to human visions and intentions

Natural Resource Governance in Asia Raza Ullah, Shubhechha Sharma, Inoue Makoto, Sobia Asghar, Ganesh Shivakoti, 2021-04-28 Natural Resource Governance in Asia From Collective Action to Resilience Thinking identifies key leverage points where interventions can be made surrounding current and future impacts of ongoing environmental and sociopolitical challenges The book utilizes case studies from Asia a key demographic for natural resource management that can be applied globally in understanding solutions and the current state of knowledge in natural resource dynamics Users will find valuable sections on community forestry and socioecological systems community irrigation competing water demand robustness issues climate change and natural resource dynamics and challenges This interdisciplinary tome on the topic is invaluable to researchers and policymakers alike Combines collective action and resilience thinking to help readers understand complex issues and challenges in natural resource management Presents methods and case studies to validate theory in practice Includes up to date research applied to current issues to address both current and future risks and uncertainties

Empire and Ecology in the Bengal Delta Debjani Bhattacharyya, 2018-05-24 What happens when a distant colonial power tries to tame an unfamiliar terrain in the world's largest tidal delta This history of dramatic ecological changes in the Bengal Delta from 1760 to 1920 involves land water and humans tracing the stories and struggles that link them together Pushing beyond narratives of environmental decline Bhattacharyya argues that property thinking a governing tool critical in making land and water discrete categories of bureaucratic and legal management was at the heart of colonial urbanization and the technologies behind the draining of Calcutta The story of ecological change is narrated alongside emergent practices of land speculation and transformation in colonial law Bhattacharyya demonstrates how this history continues to shape our built environments with devastating consequences as shown in the Bay of Bengal's receding coastline

Turbulent Streams Roderick I. Wilson, 2021-05-31 In *Turbulent Streams* An Environmental History of Japan's Rivers 1600-1930 Roderick I. Wilson describes how the rivers of Japan are both hydrologically and historically dynamic Today these waterways are slowed channeled diverted and dammed by a myriad of levees multiton concrete tetrapods and massive multipurpose dams In part this intensive engineering arises from the waterways falling great elevations over short distances flowing over unstable rock and soil and receiving large quantities of precipitation during monsoons and typhoons But this modern river regime is also the product of a history that narrowed both these waterways and people's diverse interactions with them in the name of flood control Neither a story of technological progress nor environmental decline this history introduces the concept of environmental relations as a category of historical analysis both to explore these fluvial interactions and reveal underappreciated dimensions of Japanese history
