Ajax In Oracle Jdeveloper Ajax In Oracle Jdeveloper:

Ajax in Oracle JDeveloper Deepak Vohra,2008-03-14 Asynchronous JavaScript and XML Ajax is a web technique used to transfer data between a browser and server asynchronously without posting the web page to the server Asynchronously implies that the processing of the web page continues while the Ajax request is sent to the server and a response is received from the server The web page or sections of the web page is refreshed with the Ajax response without reposting the web page Ajax has the following advantages over non Ajax web applications Reduced response time and reduced server load as the complete web page is not reposted Reduced bandwidth of web applications as only data is transferred and the HTML format is applied in the browser Separation of data format and style The book covers web search and RSS Feed with Ajax as well as form validation with Ajax frameworks for Java JSP JSF and PHP It discusses using Ajax in Oracle JDeveloper and is IDE based JDeveloper has the following advantages over Eclipse IDE JDeveloper 11g provides an integrated JavaScript Editor for Ajax Web development It also provides a PHP extension JDeveloper has a built in support for JSF and for JDBC **Web**

Fallows, 2006-11-22 Pro JSF and Ajax shows you how to leverage the full potential of JavaServer Faces JSF and Ajax This is not an entry level tutorial but a book about building Ajax enabled JSF components for sophisticated enterprise level rich Internet applications Written by JSF experts and verified by established community figures including Adam Winer member of the JSF Expert Group Java Champion Kito D Mann JSFCentral.com and JSF in Action and Matthias Weendorf MyFaces this JSF 5 compatible book provides reliable and groundbreaking JSF components to help you exploit the power of

JSF in your Java web applications This book provides a blueprint for building custom JSF user interface components and shows how to leverage the best browser technologies such as Ajax Mozilla XUL and Microsoft HTC to deliver rich Internet applications This book covers standard best practices for behavioral and renderer specific component classes renderers events and event listeners and JSP tag handlers for each It also covers advanced techniques such as dynamic content type negotiation JAR based resource delivery and dynamic render kit selection

Foreword Does the world really and truly need another JavaServer Faces book I was fairly well convinced the answer could only be a resounding no After all there s a good half dozen books out in stores today by a whole host of web luminaries and I ve even personally helped as a technical reviewer on half of those So what more could really be said on the subject But when I thought about this a bit more it became clear that all of these books only go so far They ll show you how to use what JSF gives you out of the box throw you a bone for writing your own components and renderers maybe even a bit more But none that I ve seen get to the heart of why JSF is really and truly cool and important technology they make JSF look like YAMVCF Yet Another Model View Controller Framework for HTML more powerful here and there easier to use in many places a bit harder to use in others but really nothing major And certainly nothing that takes us beyond the dull basics of building ordinary looking web applications This book goes a lot further It ll cover the basics of course and show you how to build components but then it keeps going on to AJAX on to HTC on to XUL and how you can wrap this alphabet soup up underneath the heart of JSF its component model and how you can leverage it to finally develop web applications that don t need radical re architecting every time the winds of client technologies blow in a different direction Along the way you ll learn a wide array of open source toolkits that make web magic practical even when you re not a Javascript guru So heck I m convinced The world does need another JSF book
