Body Composition And Aging Body Composition And Aging:

Body Composition and Aging C. V. Mobbs, Patrick R. Hof, 2010 Increased adiposity and decreased muscle mass contribute substantially to age dependent disease and disability In particular age related increase in adiposity is quickly becoming a major threat to public health throughout the world Although the hypothesis that age related changes in body composition are due to lifestyle choices alone is well accepted it is a vast oversimplification This volume reflects the current knowledge in this rapidly developing field of research The first part of the book discusses the extent to which increased adiposity contributes to age related diseases and longevity The obesity paradox describing the protective role of overweight in decreasing mortality while increasing pathology is covered in depth Further chapters address specific aspects of the regulation of energy balance during aging including the effects of changes in food intake Finally the causes and consequences of loss of muscle mass and age related osteoporosis are examined A valuable help for physicians treating elderly patients this book will also be of great interest to researchers studying energy balance muscle physiology bone disease and other aspects of aging

Human Body Composition Gilbert B. Forbes, 2012-12-06 Man has always been curious about himself a curiosity that began centuries ago with an examination of the soul and that extended in the period of the Renaissance to his anatomy and certain functions such as the circulation of the blood Chemical science entered the scene in the 18th century and burst into prominence in the 19th century As the various chemical elements were discovered many were found to be present in body fluids and tissues Organic compounds were recognized it became known that body heat was produced by the combustion of food chemical transformations such as the production of fat from carbohydrate were recognized and in the 1850s it was determined that young animals differed from adults in certain aspects of body composition As methods for chemical analysis evolved they were applied to samples of body fluids and tissues and it became apparent that life depended on chemical normality and most importantly it was realized that given the necessary amount of food and water the body had the ability to maintain a degree of constancy of what Claude Bernard called the milieu interieur in other words its interior chemical environment
