affordances that encouraged rapid music creation workflows through flashy user friendly interfaces Meanwhile software such as Avid's Pro Tools attempted to protect its status as the industry standard professional DAW of choice by incorporating design elements from pre digital music technologies Other software like Cycling 74's Max asserted its alterity to commercial DAWs by presenting users with nothing but a blank screen These are more than just aesthetic design choices Push examines the social cultural and political values designed into music software and how those values become embodied by musical communities through production and performance It reveals ties between the maximalist design of FL Studio skeuomorphic design in Pro Tools and gender inequity in the music products industry It connects the computational thinking required by Max as well as iZotope's innovations in artificial intelligence with the cultural politics of Silicon Valley's design thinking Finally it thinks through what happens when software becomes hardware and users externalize their screens through the use of MIDI controllers mobile media and video game controllers Amidst the perpetual upgrade culture of music technology Push provides a model for understanding software as a microcosm for the increasing convergence of globalization neoliberal capitalism and techno utopianism that has come to define our digital lives
