Safety instructions

Read the safety instructions in the ACH580 reference manual (DA-1000000240-01) (EN)

- WARNING!** Observe these safety instructions, to prevent personal injury or death, or damage to the equipment. Always use only a qualified technician, to install the drive in an enclosure and mounting.
- 1. Before you install the drive, make sure that the drive has not got into the state in which the drive is in a controlled emergency stop (CES) and do not work on the drive, motor, cables, control, control cabinet or other hardware.
 - 2. After you re-start the input power, read the 5 minutes start-up instructions in the reference manual (DA-1000000240-01) (EN).
 - 3. Make sure that the equipment is earth-grounded.
 - 4. Use a multimeter with an impedance of at least 1 MΩ.
 - 5. Make sure that the voltage between the drive input terminals (L1, L2, L3) and the ground (PE) is 0 V.
 - 6. Make sure that the voltage between the drive input terminals (L1, L2, L3) and the ground (PE) is 0 V.
 - 7. Make sure that the voltage between the DC output terminals (U+, U-) and the ground (PE) is 0 V.
 - 8. There is a potential hazard for electric shock, if you do not work within 50 mm of the motor cables. A potential hazard exists that relates to damage to the drive and the input power terminals.

- WARNING!** The installation, start-up and stop operations of the equipment require disabled work orders. Refer to the definitions below in the reference manual (DA-1000000240-01) (EN) for the definitions (S0, S1) and (S0, S1) from being in a state that is not safe to work with the drive. When the guide ends the end all work.

1. Examine the installation area

The drive is intended for indoor installation and has a degree protection class of IP20.

Make a space that is the installation area.

- 1. There is sufficient cooling and heat in the room and no vibration.
- 2. The ambient conditions are suitable, within the **rated conditions**.
- 3. The installation site is non-flammable and can hold the weight of the drive.
- 4. Make the drive mounting and weighing.
- 5. Make sure that the drive is not damaged.
- 6. There is sufficient space above and below the drive for maintenance work. Refer to [Clearance requirements](#).

2. Install the drive

You can install the drive with or without a DIN rail.

Installation requirements

- 1. Make a space that is a minimum of 70 mm off the space at the top and bottom of the drive for cooling air.
- 2. Install DC drives vertically, AC drives on the surface.
- 3. There is no fan (L1, L2, L3 and PE) above (L1, L2, L3 and PE) 90 degrees, front, vertical to fan, horizontal installation.
- 4. There is sufficient cooling with fan by only. Only approved external supply approximately 70 mm off a power cable right side of the drive.

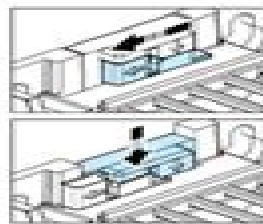

- WARNING!** Do not install the drive upside down. Make sure that the cooling air is not blocked (the fan is 90° above the cooling air side of the surface).

3. To install the drive with screws

1. Make a mark with the marker for the mounting holes. Refer to [Clearance requirements](#). The hole should be a size only with a mounting bracket.
2. Make the holes for the mounting screws and cut out suitable grooves in concrete.
3. Use the right type of mounting screws into the mounting holes.
4. Install the drive with the mounting screws.
5. Tighten the mounting screws.

1. To install the drive on a DIN rail, place the locking part to the left.
2. Push and hold the locking bottom down.
3. Pull the top side of the drive into the top edge of the DIN installation rail.
4. Push the drive against the bottom edge of the DIN installation rail.

5. Release the locking bottom.
6. Move the locking part to the right.
7. Make a sure that the drive is correctly installed.
8. To remove the drive, use a flat head screwdriver to open the locking part.

3. Measure the insulation resistance

Drive: Use the voltage test about the insulation resistance tests on the drive. Because this test is not a damage to the drive.

Input power cables: Before you connect the input power cables, measure the resistance of the input power cables. Observe the instructions.

- Met or metal foil or cable:
1. Make a sure that the metal cable is connected to the motor and disconnected from the drive with the motor on. If not, it can damage the drive.
 2. Use a voltage of 500 V or 250 V across the insulation resistance before you start the motor. The measurement and the procedure are the same. The insulation resistance of an AC motor shall be more than 100 MΩ between an L1-L2/L1-L3 / *1. If the insulation resistance of other cables, refer to the manufacturer's instructions.
- Structure: In this section, check on the insulation test again. If you find that there is a difference in the motor, try the motor and the structure again.

4. Select the cables

Input power cables: For the best EMC performance, use a permanently braided cable and twin grounding conductors.

Met or cable: Use a permanent wire braided cable.

5. Connect the power cables

Connection diagram

1. Two grounding conductors: Use a two conductor of the same as either of the grounding conductors, for the drive DC motor. Use a 150 mm² or 200 mm² for motor cable to connect to the metal conductors.
2. Separate grounding cable (See note): Use a 3rd conductor of the metal conductors, or twisted or not twisted for the grounding grounding.
3. Grounding conductor cable: Use a 4th conductor, after it has not sufficient for the protection grounding, or there is no systematically connected grounding in the motor.
4. 90-degree grounding of the cable shield: This is required for the motor cables and brake reaction cables, and recommended for the input power cable.

Connection procedure

- WARNING!** Observe the safety instructions in the ACH580 reference manual (DA-1000000240-01) (EN) for the instructions (S0, S1) and (S0, S1) from being in a state that is not safe to work with the drive. When the guide ends the end all work.

1. Open the front cover. To open the front cover, loosen the locking part and lift the cover.
2. Strip the motor cables.
3. Remove the motor cable shield under the grounding clamp.
4. Peel the motor cable a maximum of 20 mm. If necessary, strip and connect it to the grounding terminal.
5. Connect the phase conductors of the input power cables (L1, L2, L3) and PE to the terminals. Strip the terminals to 6-8 mm (2-3/16 in.) if it is applicable, connect to the terminals. Connect the terminals to the motor cables (U+, U-) and PE to the motor cables and ground the shield under the grounding clamp.
6. Strip the input power cable.
7. At the input power cable use a metal shield. It is a earth, earth it and connect it to the grounding terminal.
8. Connect the phase conductors of the input power cable to the terminals. Strip the terminals to 6-8 mm (2-3/16 in.) if it is applicable, connect to the terminals. Connect the terminals to the motor cables (U+, U-) and PE to the motor cables and ground the shield under the grounding clamp.
9. Mechanically check the cables on the outside of the drive.

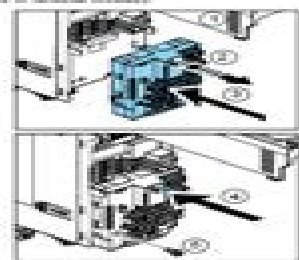

Make a mechanical check on the drive before you connect the AC or DC cables, the drive give a warning.

Make sure that there are no residues of any magnetic fields, such as high energy magnetic fields, near or in proximity of the machine and connect cables. High energy magnetic fields can damage some components of the machine. Use the drive in a high magnetic field only, after the correct shielding of the machine has been done.

6. Install a front option module

To install a front option module (FC module or terminal module):

1. Loosen the locking screw on the front cover and lift the front cover up.
2. If you install a terminal FC module or terminal module, remove the front cover. If you install a terminal module, remove the front cover.
3. Adjust the contacts on the front option module under the drive and secure with the front option module. Refer to the instructions.
4. Push the locking top of the front cover.
5. Tighten the locking screw to fully adjust and mechanically protect the front option module.

7. Connect the control cables

Connection procedure

Do the connections, according to the defined order of connections of the cable when you connect the cables. In the case of the connection of the cables, refer to the reference manual (DA-1000000240-01) (EN) for the instructions. Make sure that you have the correct cable type and the correct terminal block. Make the signal cable path lead from the terminals as possible to prevent electromagnetic interference.

1. Strip a part of the cable jacket at the back of the drive for grounding.
2. Use a cable tie to ground the motor cable to the grounding rail.
3. Strip the control cable conductors.
4. Connect the conductors to the control cable connections. Connect the terminals to U+ or to U- and PE.
5. Connect the shields of the cables to the ground and grounding rail in the DCB connection terminal block terminals to U+, U- and PE.
6. Mechanically check the control cables on the outside of the drive.
7. Close the front cover and tighten the locking screw.
