Ad Hoc Wireless Networks Architectures And Protocols:

Ad Hoc Wireless Networks C. Siva Ram Murthy, B. S. Manoj, 2004-05-24 Practical design and performance solutions for every ad hoc wireless network Ad Hoc Wireless Networks comprise mobile devices that use wireless transmission for communication They can be set up anywhere and any time because they eliminate the complexities of infrastructure setup and central administration and they have enormous commercial and military potential Now there s a book that addresses every major issue related to their design and performance Ad Hoc Wireless Networks Architectures and Protocols presents state of the art techniques and solutions and supports them with easy to understand examples The book starts off with the fundamentals of wireless networking wireless PANs LANs MANs WANs and wireless Internet and goes on to address such current topics as Wi Fi networks optical wireless networks and hybrid wireless architectures Coverage includes Medium access control routing multicasting and transport protocols QoS provisioning energy management security multihop pricing and much more In depth discussion of wireless sensor networks and ultra wideband technology More than 200 examples and end of chapter problems Ad Hoc Wireless Networks is an invaluable resource for every network engineer technical manager and researcher designing or building ad hoc wireless networks

Ad Hoc Wireless Networks Architectures And Protocols C.S.R. Murthy, 2012 **Ad Hoc Wireless Networks: Architectures and Protocols** Idris Ibrahim, Dr, Dr. Idris Al-Skloul Ibrahim, 2011-07 Providing a convenient routing protocol for MANETs is a challenge because of the dynamic topology Therefore the suitability of each routing protocol depends on many parameters such as network size node mobility speed and traffic load All that together with the dynamic nature of MANETs made an optimum routing protocol selection a complicated task Extensive nodal mobility of MANETs makes multi hop routing a genuine challenge The frequent topology changes and variable propagation conditions make a routing table obsolete very quickly which results in enormous control overhead for route discovery and maintenance In this book we develop and present a new hybrid routing protocol called Multipath Distance Vector Zone Routing Protocol which is referred to as MDVZRP In MDVZRP we assume that all the routes in the routing table are active and usable at anytime unless the node received or discovered a broken link There is no need to periodically update the routing tables therefore reducing the periodic update messages and hence reducing the control traffic in the entire network The protocol guarantees loop freedom and alternative disjoint paths
