

Content, Key Terms and Essential Questions

Describe the system of the Aral Sea in terms of inputs, outputs, and size.

What happens to matter? What about energy?
Thermodynamics state? How does this relate to the Earth system?

Thermodynamics state? How does this relate to the Earth system?

Thermodynamics, not all of the energy from the gasoline you put in your car goes forward. What happens to the rest?

Describe the system of the Aral Sea in terms of inputs, outputs, and size.

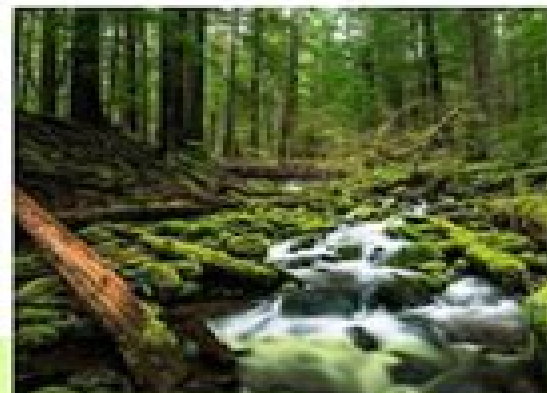

What happens to matter? What about energy?

Thermodynamics state? How does this relate to the Earth system?

Thermodynamics, not all of the energy from the gasoline you put in your car goes forward. What happens to the rest?

Describe the system of the Aral Sea in terms of inputs, outputs, and size.

What happens to matter? What about energy?

Pollutant (Examples)	Source(s)	Problem(s)
BOD:	- Decomposition of dead organic matter - Includes agriculture (30%) combined sewer system	- Creates a dead zone - Killing fish and decreases DO
Fecal Coliforms (E. coli)	Waste from mammals and birds, agricultural storm runoff (feedlots) and human sewage	Disease, the level of harm depends on the type of fecal coliform
Crude Oil:	Tankers, offshore drillings, etc.	- Violent evaporates → air pollution and toxic - Coat the feathers of birds so they can't fly - Coat the fur of mammals - Hard "crust" on the surface of the water - Not eaten by fish and birds - Tankers can't be cleaned - Continue to pollute the water

Environmental Science

UNIT 1 Topics, Content, Key Terms and Essential Questions

Policy	Regulates the discharge of pollutants into waters
1977	Unlawful to discharge pollutants into surface waters without a permit
1977	Regulates quality standards for surface waters
1977	Shift over time from a source-oriented and pollutant-by-pollutant focus to a watershed focus
1974	Establishes standards for public drinking water
1970	Authorized the development of comprehensive federal and state regulations to limit emissions from both stationary (industrial) sources and mobile sources
1990	- Acid Deposition: limits maximum SO₂ emissions from coal-fired power plants (cap-and-trade system for SO₂ emissions permits) - Also limits NO_x, toxics, CFCs and other chlorine chemicals - More stringent emission controls on cars and requirements for cleaner burning fuels to reduce urban smog
Standards	- Regulates CO, NO₂, O₃, Pb, PMs and SO₂ - Tougher standards for ozone and PM to help children and elderly who are most susceptible to air pollution
Recovery Act	Design, operation & monitoring of sanitary landfills

Environmental Systems

Describe what happened to the system of the Aral Sea in terms of its inputs, outputs, and size.

The Aral Sea used to be the fourth largest sea on the planet and people used it for rice and cotton and it wasn't very efficient irrigation. Then in 2014, it became a lake.

What happened to the water to the sea? It was inputting the water to the sea. It was a reservoir. The water was being used for irrigation.

What type of system is Earth with respect to matter? What about energy? Earth is a closed system (it is the atom that makes up) and it is conserved on earth. It is an open system.

What does the First Law of Thermodynamics state? How does this relate to Earth? It states, "Energy cannot be created or destroyed, it can only change form or be transferred to another system." The energy from the sun is transferred through nuclear fusion in the sun's core. The energy from the sun is transferred through nuclear fusion in the sun's core. The energy from the sun is transferred through nuclear fusion in the sun's core.

What does the Second Law of Thermodynamics state? How does this relate to Earth? The second law of thermodynamics states that you cannot break even. It is changed from one form to another, it always moves from a more useful form to a less useful form.

Based on the second law of thermodynamics, not all of the energy from a car gets used to move the car forward. What happens to the rest? The rest can be good for air conditioning, and charging your phone.

Using a systems analysis approach (inputs vs. outputs), describe why global warming is occurring. Inputs (greenhouse gases) are absorbing and trapping the heat that is being emitted by the Earth's surface. The output is global warming.

How does negative feedback affect the steady state of a system? What is negative feedback? A negative feedback is self-regulating and stabilizing because the output of the system is used to reduce the input.

Describe the system of the Aral Sea in terms of inputs, outputs, and size. The Aral Sea is a closed system with inputs from rivers and outputs to the atmosphere and the ground. The size of the sea is decreasing due to the loss of water.

What happens to matter? What about energy? Matter is conserved in the system, but energy is not. Energy is being lost from the system through evaporation and reflection.
