Rajamani, 2018-12-11 Condition Based Maintenance in Aviation The History The Business and The Technology describes the
history and practice of Condition Based Maintenance CBM systems by showcasing ten technical papers from the archives of
SAE International stretching from the dawn of the jet age down to the present times By scientifically understanding how
different components degrade during operations it is possible to schedule inspections repairs and overhauls at appropriate
intervals so that any incipient failure can be detected well in advance Today this includes more sensors and analytics so that
periodic inspections are replaced by automated continuous inspections and analytical methods that detect imminent failures
and predict degradation issues more economically and efficiently Similar concepts are also being developed for delivering
prognostics functions such as tracking of remaining useful life RUL of life limited parts in aircraft engines The discipline
within CBM that deals with this is called prognostics and health management PHM which covers all aspects of diagnostics
and prognostics including modeling of systems and subsystems sensing data transmission storage and retrieval analytical
methods and decision making Traditionally nondestructive testing NDT methods have been employed during the major
airplane checks to assess structural damage These techniques are enhanced with in situ sensing techniques that can
continuously monitor aircraft structures and report on their health The move to condition based assessment of maintenance
needs to be balanced by the assurance that safety is not compromised that initial cost of new equipment is amortized by the
savings and that regulatory authorities are on board with any modifications to the planned maintenance schedule The trend
is clearly to include more CBM functions into Maintenance Repair and Overhaul MRO processes so better cost control can be
achieved without ever comprising passenger safety **Flying Magazine** ,2005-12 **Federal Register** ,2005-11 **Civil
and Military Airworthiness** Kyriakos I. Kourousis, 2020-05-27 Airworthiness as a field encompasses the technical and non
technical activities required to design certify produce maintain and safely operate an aircraft throughout its lifespan The
evolving technology science and engineering methods and most importantly aviation regulation offer new opportunities and
create new challenges for the aviation industry This book assembles review and research articles across a variety of topics in
the field of airworthiness aircraft maintenance safety management human factors cost analysis structures risk assessment
unmanned aerial vehicles and regulations This selection of papers informs the industry practitioners and researchers on
important issues
