Image-Based and Fractional-Order Control for Mechatronic Systems Cosmin Copot, Clara Mihaela Ionescu, Cristina I. Muresan, 2020-04-10 This book unites two fast developing forms of control vision based control and fractional order control and applies them in mechatronic systems Image Based and Fractional Order Control for Mechatronic Systems is presented in two parts covering the theory and applications of the subject matter The theoretical material presents the concepts of visual servoing and image based feature extraction for feedback loops and fractional order control It discusses a range of systems from the classic monocular camera to new RGB D sensors The applications part of the book first discusses practical issues with the implementation of fractional order control comparing them with more traditional integer order PID systems The authors then introduce real life examples such as a manipulator robot and a Stewart platform and results generated from such systems MATLAB functions and source codes are included wherever relevant to help readers develop simulations based on the theoretical ideas and practical examples in the text Suggestions for the use of other pertinent open source software are also indicated with the places where such may be obtained With its combination of theoretical ideas and practical examples Image Based and Fractional Order Control for Mechatronic Systems will be of interest to academic researchers looking to develop the fields of vision based and fractional order control and to engineers who are looking for developments that will help them provide closer control of their plants than can be achieved with integer order PID Advances in Industrial Control reports and encourages the transfer of technology in control engineering The rapid development of control technology has an impact on all areas of the control discipline The series offers an opportunity for researchers to present an extended exposition of new work in all aspects of industrial control **Service Oriented, Holonic and Multi-Agent**

Manufacturing Systems for Industry of the Future Theodor Borangiu, Damien Trentesaux, Paulo Leitão, Olivier Cardin, Samir Lamouri, 2021-03-02 The scientific theme of the book concerns Manufacturing as a Service MaaS which is developed in a layered cloud networked manufacturing perspective from the shop floor resource sharing model to the virtual enterprise collaborative model by distributing the cost of the manufacturing infrastructure equipment software maintenance networking across all customers MaaS is approached in terms of new models of service oriented knowledge based manufacturing systems optimized and reality aware that deliver value to customer and manufacturer via Big data analytics Internet of Things communications Machine learning and Digital twins embedded in Cyber Physical System frameworks From product design to after sales services MaaS relies on the servitization of manufacturing operations such as Design as a Service Predict as a Service or Maintain as a service The general scope of the book is to foster innovation in smart and sustainable manufacturing and logistics systems and in this context to promote concepts methods and solutions for the digital transformation of manufacturing through service orientation in holonic and agent based control with distributed intelligence The book s readership is comprised by researchers and engineers working in the manufacturing value chain area who

develop and use digital control solutions in the Industry of the Future vision The book also addresses to master and Ph D students enrolled in Engineering Sciences programs **Prediction of Thermal Capacitance Variations During Friction Stir Welding** Keith A.
