

SOLUTIONS TO THE STUDY GUIDE FOR MODULE #16

1. a. Autonomic nervous system – The system of nerves that carries instructions from the CNS to the body's smooth muscles, cardiac muscle, and glands
 - b. Sensory nervous system – The system of nerves that carries information from the body's receptors to the CNS
 - c. Somatic motor nervous system – The system of nerves that carries instructions from the CNS to the skeletal muscles
2. Neurons and neuroglia are the two principal kinds of cells in the human nervous system.
 3. *See figure 16.3:*
 - a. dendrites b. nucleus c. cell body d. axon e. myelin sheath
 4. Dendrites carry electrical signals to the cell body.
 5. Axons carry electrical signals away from the cell body.
 6. A synapse is a small gap between the axon of a neuron and the receiving end of another cell. It is where nerve signals get transferred from one cell to another.
 7. When the electrical signal reaches the end of the axon, neurotransmitters are released. They travel across the synapse. Once they reach the receiving cell, they create a new electrical signal.
 8. Neuroglia support the neurons by performing tasks that make it possible for the neurons to do their job.
 9. The nerve is a part of the PNS. The PNS contains all nerves that run off of the spinal cord. If it is in the leg, it is off the spinal cord.
 10. The CNS is made up of the brain and the spinal cord.
 11. The skull and the cerebrospinal fluid protect the brain.
 12. The vertebral column protects the spinal cord. You could also say "the backbone."
 13. Gray matter is made up mostly of neuron cell bodies.
 14. White matter is made up mostly of the axons of neurons.
 15. The corpus callosum allows the two sides of the brain to communicate with one another.
 16. The cerebellum is mostly in charge of skeletal muscle movements, especially fine movements.

Functions and Uses of Disciplinary Histories Loren Graham, Wolf Lepenies, P. Weingart, 2012-12-06 Edward Gibbon's allegation at the beginning of his Essay on the Study of Literature 1764 that the history of empires is that of the miseries of humankind whereas the history of the sciences is that of their splendour and happiness has for a long time been accepted by professional scientists and by historians of science alike For its practitioner the history of a discipline displayed above all the always difficult but finally rewarding approach to a truth which was incorporated in the discipline in its actual form Looking back it was only too easy to distinguish those who erred and heretics in the field from the few forerunners of true science On the one hand the traditional history of science was told as a story of hero and hero worship on the other hand it was paradoxically enough the constant attempt to remind the scientist whom he should better forget It is not surprising at all therefore that the traditional history of science was a field of only minor interest for the practitioner of a distinct scientific discipline or specialty and at the same time a hardly challenging task for the professional historian Nietzsche had already described the historian of science as someone who arrives late after harvest time it is somebody who is only a tolerated guest at the thanksgiving dinner of the scientific community
