What is a programmable room thermostat?

...an explanation for homeowners

A programmable room thermostat is both a programmer and a room thermostat. A programmer allows you to set different times of the day and days of the week for which you want the room thermostat to set a different temperature for the room. A room thermostat is the part of the thermostat that controls the temperature of the room.

An adjustable room thermostat allows you to choose what time you want the thermostat to start, what time you want the thermostat to stop, and how often you want the thermostat to change the temperature of the room. The thermostat will only change the temperature of the room when the thermostat is in the 'on' mode.

Setting a programmable room thermostat to a higher setting will not mean that the room will be warmer than it should be. The thermostat will only change the temperature of the room when the thermostat is in the 'on' mode.

When you are setting a room thermostat, you should be aware that the thermostat will only change the temperature of the room when the thermostat is in the 'on' mode.

The room thermostat will only change the temperature of the room when the thermostat is in the 'on' mode. The thermostat will only change the temperature of the room when the thermostat is in the 'on' mode.

Your heating system is controlled by the thermostat. The thermostat will only change the temperature of the room when the thermostat is in the 'on' mode.
