Meyers, Glenn Gamst, A.J. Guarino, 2006 Multivariate designs were once the province of the very few exalted researchers who understood the underlying advanced mathematics Today through the sophistication of statistical software packages such as SPSS virtually all graduate students across the social and behavioural sciences are exposed to the complex multivariate statistical techniques without having to learn the mathematical computations needed to acquire the data output These students in psychology education political science etc will never be statisticians and appropriately so their preparation and coursework reflects less of an emphasis on the mathematical complexities of multivariate statistics and more on the analysis and the interpretation of the methods themselves and the actual data output This book provides full coverage of the wide range of multivariate topics in a conceptual rather than mathematical approach The author gears toward the needs level of sophistication and interest in multivariate methodology of students in applied areas that need to focus on design and interpretation rather than the intricacies of specific computations The book includes Coverage of the most widely used multivariate designs multiple regression exploratory factor analysis MANOVA and structural equation modeling Integrated SPSS examples for hands on learning from one large study for consistency of application throughout the text Examples of written results to enable students to learn how the results of these procedures are communicated Practical application of the techniques using contemporary studies that will resonate with students

Applied Multiple Regression/Correlation Analysis for Aviation Research Michael A. Gallo, Ulreen O. McKinney, 2025-07-24 Applied Multiple Regression Correlation Analysis for Aviation Research describes and illustrates multiple regression correlation MRC analysis in an aviation context including flight instruction airport design airline routes and aviation human

factors research Structured in four parts the book first reviews the major concepts of bivariate correlation and regression and then extends the bivariate case to two four and k predictors coupled with discussions on statistical inference underlying assumptions and regression diagnostics relative to MRC analysis The book then builds on this foundation by presenting MRC variable selection strategies simultaneous hierarchical and statistical regression analyzing sets of predictors and introducing coding strategies for nominal predictors The book concludes by presenting how MRC can be used to conduct an analysis of covariance ANCOVA interactions mediation analysis and binary logistic regression Throughout the presentation the book provides a balance between procedural knowledge as well as conceptual understanding Detailed guided examples are presented at the end of each chapter that apply the topics and concepts of the chapter from the perspective of conducting a research study The analytic strategies demonstrated via these guided examples are clearly explained enabling readers to understand conduct and report results correctly Pedagogical features associated with each chapter include a set of student learning outcomes and an end of chapter package that consists of a summary of the chapter s main topics concepts a list of key terms and review exercises including multiple choice items and a research scenario with data for students to analyze Tailored to the needs of aviation students Applied Multiple Regression Correlation Analysis for Aviation Research is the ideal textbook for research oriented graduate aviation programs such as a thesis based master s degree or doctoral program that require knowledge of advanced statistical strategies for analyzing research data
