Balance Sheet

Assets are economic resources, whereas **liabilities** and **stockholders' equity** are sources of financing for the economic resources. Liabilities are economic resource providers, whereas the financing provided by the owners of the corporation is **stockholders' equity**. Assets, liabilities, and equity are reported on the **balance sheet**, every balance sheet of a corporation is based on the following equation:

FORMULA: Assets = Liabilities + Stockholders' Equity

 Misstating the balance sheet formula can help when predicting business transactions, understanding how a transaction impacts the elements of the balance sheet is fundamental to transaction analysis and the practice of accounting.

Net worth, calculated for both individuals and business entities, is a measure of wealth (the net worth formula is a derivative of the balance sheet equation).

FORMULA: Net Worth = Assets - Liabilities

EX: If you own assets worth \$750,000 and have liabilities of \$250,000, then your net worth is \$500,000 (i.e., \$750,000 - \$250,000).

 Since a corporation's organization does not have owners, the third section of the balance sheet is known as **net assets** (instead of owner's equity or stockholders' equity) in a corporation's balance sheet is represented by the following accounting equation:

FORMULA: Assets = Liabilities + Net Assets

Assets are the resources owned by the business; payment assets include cash, accounts, and notes receivable; inventory; and prepaid expenses; nonpayment assets include long-term investments, property and equipment, and intangible assets.

FORMULA: Assets = Current Assets + Noncurrent Assets

Liabilities are the obligations or claims of the business against the assets of that business; current liabilities include accounts payable, notes payable, and accrued liabilities payable; noncurrent liabilities include all long-term debts.

FORMULA: Liabilities = Current Liabilities + Noncurrent Liabilities

 Sometimes firms have obligations that do not show up on the balance sheet; these "off balance sheet" liabilities are additions to the balance sheet but can be substantial and may seriously impact the financial health of the entity.

Equity, synonymous with net worth, is the ownership interest in a company; part of equity is contributed capital, which includes investments made by stockholders in the company's common and preferred stocks; another part is retained earnings, which is the net income that has been invested in the entity since the start of its existence.

FORMULA: Stockholders' Equity = Contributed Capital + Retained Earnings

Changes in the retained earnings balance (i.e., income or decrease) can happen whenever a company is profitable (net income), is profitable and pays, or pays dividends; net income increases retained earnings and dividends, which are earnings paid to stockholders, and reduces the balance of retained earnings.

FORMULA: Change in Retained Earnings = Net Income - Dividends

 Net income reduces retained earnings on the owner prior period adjustments for overstatements of net income prior period adjustments for understatements of net income increase retained earnings.

In a partnership, the equity is called **partners' capital**, which is measured by the capital contributions by partners (current assets and debts) and decreased when there is a net loss or when partners withdraw capital (drawings).

FORMULA: Ending Capital = Beginning Capital + Net Income (or - Net Loss) - Drawings

EX: If the beginning capital is \$200,000, net income for the year is \$50,000 with no new investments, and the owner drew out \$20,000, then the ending capital will be \$230,000 (i.e., \$200,000 + \$50,000 - \$20,000).

Income Statement & Retained Earnings

The income statement consists of formulae to calculate net income or net loss; revenues are earned from the sale of goods or services to customers; whereas expenses represent the amount of resources the entity used to earn the revenues; if the revenues are greater than the expenses, then the result of the formula is a positive number (net income); if the expenses are greater than the revenues, then the result of the formula is a negative number (net loss). The income statement also known as the statement of income, statement of earnings, statement of operations, or the profit (and loss) statement (P&L) - consists the following formula:

FORMULA: Net Income (or Net Loss) = Revenues - Expenses

Net sales are the net revenue of a business; net sales take into account discounts given to customers for various reasons.

FORMULA: Net Sales = Gross Sales - Sales Discounts - Credit Card Discounts - Sales Returns and Allowances

HINTS:

Gross Sales = Total sales for a period before subtracting discounts.

Sales Discounts = Discounts given because of early payment.

Credit Card Discounts = The amount charged by the credit card company (e.g., 2% of sales amount).

Sales Returns and Allowances = A reduction of sales revenue for returns or allowances for unsatisfactory goods.

EX: If gross sales are \$1,000,000 with discounts of \$100,000 granted for early payment and return of \$20,000, then the net sales would be \$880,000 (i.e., \$1,000,000 - \$100,000 - \$20,000).

 Net income is an important concept, as it is the residual amount after expenses for the revenues and stockholders with corporations, income available to common stockholders in a non-dividend corporation, or it gives a more refined, accurate picture of profitability.

FORMULA: Income Available to Common Stockholders = Net Income - Dividends or Preferred Divids for the Current Period

Income statements can be prepared in various formats; one popular format is the **classified income statement**, which shows the income from operations and the net income for a particular period of time arranged as follows:

Net Sales
Cost of Goods Sold
Gross Margin
Operating Expenses
Net Operating Income
Nonoperating Revenues and/or Expenses and Gains and/or Losses
Income Before Income Taxes
Income Taxes
Net Income

The calculation of net income is really the result of several formulas, such as gross margin, net operating income, and income before taxes:

FORMULA: Gross Margin = Net Sales - Cost of Goods Sold

Net Operating Income = Gross Margin - Operating Expenses

Income Before Income Taxes = Net Operating Income + Nonoperating Revenues and/or Gains - Nonoperating Expenses and/or Losses

Net Income = Income Before Income Taxes - Income Taxes

EX: If net sales are \$750,000 and the cost of goods sold is \$200,000, then the gross margin is \$550,000 (i.e., \$750,000 - \$200,000), which must cover the operating expenses in order to break even or produce net income.

 Gross margin is also called **gross profit**.

Net income statement can also be prepared in the **contribution margin format**, which is useful to managers for decision-making purposes.

FORMULA: Net Income = Contribution Margin - Variable Expenses = Contribution Margin - Fixed Expenses

 The contribution margin format can also be used to construct a budget income statement.

FORMULA: Segment Revenue (or Sales) - Segment Variable Expenses = Contribution Margin - Segment Fixed Expenses = Segment Margin

 Breakable fixed expenses are those expenses that not only are fixed but also can be decreased with the expense with a high degree of accuracy.

 A segment can be a division, product, customer, or territory - that is, any part of a business that which management wants to track profitability. Since a company's operations program is its primary program that must contain national needs, it issues a statement of activities (instead of the income statement issued by a for-profit business), which shows the ending balance of the assets.

FORMULA: Ending Net Assets = Revenues - Expenses + Beginning Net Assets

RECAP:

Revenues = Cash sales or contributions by donors, membership dues, program fees, money raised from fundraising events, grants, and investment income.

Expenses = Program expenses, which are the resources directly incurred by the nonprofit in carrying out its program and supporting-services expenses, including management general and fundraising expenses.

 Nonprofit and governmental agencies produce a form of accounting that is a bit different than GAAP, whereas the annual report is the focus of for-profit companies, the budget is the government report that a nonprofit and governmental agency.

Earnings per share (EPS) is the amount of common stock earnings that can be associated with a single share of a corporation's common stock, or parity with a single capital structure (only common stock commanding) for basic earnings per share (EPS).

FORMULA: EPS =
$$\frac{\text{Income Available to Common Stockholders}}{\text{Weighted-Average Number of Common Shares Outstanding}}$$
