Acupuncture Research Acupuncture Research:

Acupuncture Research Hugh MacPherson, Richard Hammerschlag, George Thomas Lewith, Rosa N. Schnyer, 2007-10-12 This is the first book to set out a full range of research strategies for evaluating the clinical practice of acupuncture. Leading acupuncturists and researchers with international reputations share their expertise. They illustrate their descriptions with practical examples of what has worked and what has not. It outlines many of the key challenges in the field. These challenges relate to the nature of acupuncture and the gap between current research evidence and the actual experiences of acupuncturists in the field. By focusing the chapters on key research questions rather than methods, the book has a user-friendly feel. Each chapter is easily accessible with brief explanations of research designs as well as vignettes of relevant past research. The book is based on a deep understanding of acupuncture with its inherent complexity in practice, whether based on traditional principles or more modern concepts. By incorporating a more sophisticated understanding of the field, this book details a range of strategies aiming to develop the evidence base with the utmost rigour. It is the first book on acupuncture research to take this unique view, integrating the very best of evidence-based medicine with a genuine sensitivity to the discipline of acupuncture from its traditional and holistic roots to its more modern interpretations. Translational Acupuncture Research Ying Xia, 2019-05-28. Written by many scientists and clinicians from China, USA, Canada, and other countries, this monograph discusses translational research on acupuncture. Besides general topics on acupuncture practice, e.g. different styles and techniques of acupuncture, topics include some refractory diseases such as chronic fatigue syndrome, Parkinson's disease, cardiovascular dysfunction, chronic pain, post-concussion syndrome, and post-traumatic stress disorder, and cancer-related symptoms. The factors influencing acupuncture research are comprehensively addressed in the final chapter. This unique book provides a translational perspective on modern acupuncture for not only acupuncturists but also neuroscientists, neurologists, and other clinicians. For medical students and undergraduate and graduate students majoring in biology, this book is an advanced course for learning the progress in alternative and complementary medicine.

Proceedings: NIH Acupuncture Research Conference Howard P. Jenerick, 1973. Current Research in Acupuncture Ying Xia, Guanghong Ding, Gen-Cheng Wu, 2012-08-09. Written by over 60 scientists and clinicians from the United States, mainland China, Germany, Australia, Japan, Sweden, Portugal, and Hong Kong, Current Research in Acupuncture discusses recent advances in acupuncture research in a modern scientific language. The first 5 chapters investigate the basic mechanisms of acupuncture. Later chapters explore topics including acupuncture treatment and potential mechanisms for epilepsy, Parkinson's diseases, neurodegenerative disorders such as Alzheimer's disease, vascular cognitive impairment, aging, anxiety, polycystic ovary syndrome, pain, nerve root, cervical spondylosis, stroke, inflammation, myocardial ischemia, and other cardiovascular diseases. Following the translational and clinical discussions, 4 chapters present new prospects for acupuncture theories and applications. The final chapter comments on the pitfalls and problems of the previous studies and

suggests direction for future research towards in depth understanding of acupuncture along with better application of acupuncture in modern medicine Each chapter is written by one or more experts in the field This unique book provides a broad perspective on the principles of acupuncture for acupuncture researchers and neuroscientists The laboratory and clinical investigations of various acupoints and optimal conditions provide unique clues to acupuncturists for improved clinical efficacy For a medical student this book is a modern course in ancient Traditional Chinese Medicine especially acupuncture Ying Xia the chief editor is Professor and Vice Chairman of the Department of Neurosurgery at The University of Texas Medical School in Houston Texas USA Guanghong Ding is Professor in the Department of Mechanics and Engineering Science at Fudan University and Director of Shanghai Research Center for Acupuncture and Meridians Shanghai China Gen Cheng Wu is Professor of Neurobiology Chairman Department of Integrative Medicine and Neurobiology Director Institute of Acupuncture Research and Director WHO Collaborating Center for Traditional Medicine at Shanghai Medical College of Fudan University Shanghai China

Advanced Acupuncture Research: From Bench to Bedside Ying Xia, 2022-07-26 Written by over seventy scientists and clinicians worldwide from China USA Germany Canada Japan and other countries this monograph with nearly 450 figures and tables covers a wide range of advanced progress in acupuncture research from experimental research to clinical applications In addition to exploring the histopathological basis for acupuncture and mathematical simulation of acupoint response to stimulation initiation and transduction of acupuncture signals and cellular mechanisms during acupuncture effects as well as chemical and physical characteristics of moxibustion on acupoints are broadly discussed The topics also include novel data on acupuncture effect with advanced imaging techniques a unique understanding of meridian viscera correlation specific interactions between meridians and neurosensory organs within the system of homeostatic regulation and the acupuncture induced influences on autonomic function Several chapters introduce specific approaches with dry needling silver needling and stainless needling for certain diseases such as myofascitis supportive care for breast cancer and chemotherapy induced peripheral neuropathy as well as perioperative care of surgical patients Moreover this book discusses recent research on acupuncture therapy and potential mechanisms for a number of severe and refractory neurological disorders including hyperactivity of hypothalamic pituitary adrenal axis orofacial pain chronic pain itch multiple sclerosis autism spectrum disorders cerebral palsy depressive disorders Alzheimer s disease and ischemic brain injury The vast amount of information offered in this book provides a comprehensive perspective on advanced acupuncture research to not only acupuncturists but also to neuroscientists neurologists and other clinicians For medical students and graduate and undergraduate students majoring in biology physiology and neuroscience this book offers an advanced course in learning about the mechanism driven advances in alternative and complementary medicine

Clinical Acupuncture Gabriel Stux, Richard Hammerschlag, 2011-06-28 Acupuncture is rapidly moving out of the arena of alternative medicine in large part because it is grounded more firmly than other alternative treatments in research This book provides
