Compression and Communication Feng Wu, 2014-07-25 Visual information is one of the richest and most bandwidth consuming modes of communication To meet the requirements of emerging applications powerful data compression and transmission techniques are required to achieve highly efficient communication even in the presence of growing communication channels that offer increased bandwidth Presenting the results of the author's years of research on visual data compression and transmission *Advances in Visual Data Compression and Communication Meeting the Requirements of New Applications* provides a theoretical and technical basis for advanced research on visual data compression and communication The book studies the drifting problem in scalable video coding analyzes the reasons causing the problem and proposes various solutions to the problem It explores the author's Barbell based lifting coding scheme that has been adopted as common software by MPEG It also proposes a unified framework for deriving a directional transform from the nondirectional counterpart The structure of the framework and the statistic distribution of coefficients are similar to those of the nondirectional transforms which facilitates subsequent entropy coding Exploring the visual correlation that exists in media the text extends the current coding framework from different aspects including advanced image synthesis from description and reconstruction to organizing correlated images as a pseudo sequence It explains how to apply compressive sensing to solve the data compression problem during transmission and covers novel research on compressive sensor data gathering random projection codes and compressive modulation For analog and digital transmission technologies the book develops the pseudo analog transmission for media and explores cutting edge research on distributed pseudo analog transmission denoising in pseudo analog transmission and supporting MIMO It concludes by considering emerging developments of information theory for future applications Multidimensional Signal, Image, and Video Processing and Coding John W. Woods, 2011-05-31 Multidimensional Signal Image and Video Processing and Coding gives a concise introduction to both image and video processing providing a balanced coverage between theory applications and standards It

gives an introduction to both 2 D and 3 D signal processing theory supported by an introduction to random processes and some essential results from information theory providing the necessary foundation for a full understanding of the image and video processing concepts that follow A significant new feature is the explanation of practical network coding methods for image and video transmission There is also coverage of new approaches such as super resolution methods non local processing and directional transforms Multidimensional Signal Image and Video Processing and Coding also has on line support that contains many short MATLAB programs that complement examples and exercises on multidimensional signal image and video processing There are numerous short video clips showing applications in video processing and coding plus a copy of the vidview video player for playing yuv video files on a Windows PC and an illustration of the effect of packet loss on H 264 AVC coded bitstreams New to this edition New appendices on random processes information theory New coverage of image analysis edge detection linking clustering and segmentation Expanded coverage on image sensing and perception including color spaces Now summarizes the new MPEG coding standards scalable video coding SVC and multiview video coding MVC in addition to coverage of H 264 AVC Updated video processing material including new example on scalable video coding and more material on object and region based video coding More on video coding for networks including practical network coding PNC highlighting the significant advantages of PNC for both video downloading and streaming New coverage of super resolution methods for image and video Only R D level tutorial that gives an integrated treatment of image and video processing topics that are interconnected New chapters on introductory random processes information theory and image enhancement and analysis Coverage and discussion of the latest standards in video coding H 264 AVC and the new scalable video standard SVC
