Design Guide for Concrete-filled Double Skin Steel Tubular Structures Lin-Hai Han, Dennis Lam, David Nethercot, 2018-10-12 This is the first design guide on concrete filled double skin steel tubular CFST structures. It addresses in particular CFST structures with plain concrete sandwiched between circular hollow sections and provides the relevant calculation methods and construction provisions for CFST structures. These inherit the advantages of conventional concrete filled steel tubular CFST structures including high strength, good ductility and durability, high fire resistance and favourable constructability. Moreover, because of their unique sectional configuration, CFST structures have been proved to possess lighter weight, higher bending stiffness and better cyclic performance than conventional CFST. Consequently, CFST can offer reduced concrete consumption and construction costs. This design guide is for engineers designing electrical grid infrastructures, wind power towers, bridge piers and other structures requiring light self weight, high bending stiffness and high bearing capacity.

Dynamics of Civil Structures, Volume 2 Shamim Pakzad, 2025-08-07 Dynamics of Civil Structures Volume 2 Proceedings of the 38th IMAC A Conference and Exposition on Structural Dynamics 2020, the second volume of eight from the Conference brings together contributions to this important area of research and engineering. The collection presents early findings and case studies on fundamental and applied aspects of the Dynamics of Civil Structures including papers on Structural Vibration, Humans Structures, Innovative Measurement for Structural Applications, Smart Structures and Automation, Modal Identification of Structural Systems, Bridges and Novel Vibration Analysis, Sensors and Control.
