Anniversary Let Ads:

Collection of Articles Dedicated to Academician I. M. Vinogradov on the Eightieth Anniversary of His Birth

Ivan Matveevič Vinogradov, 1973 A two volume collection of mathematical papers on algebra and mathematics in honor of famed Russian mathematician I M Vinogradov *The Maz'ya Anniversary Collection* Jürgen Rossmann, Peter Takac, Günther Wildenhain, 2012-12-06 During the week of August 31 September 4 1998 a conference in honour of Vladimir Maz ya was held in Rostock as a satellite meeting of the World Congress of Mathematicians It was sponsored by the German Research Foundation Deutsche Forschungsgemeinschaft and the Ministry of Education and Cultural Affairs of the land Mecklenburg Vorpommern During his forty year career Maz ya contributed to so many areas of mathematical analysis that such a broad topic of the conference as Functional Analysis Partial Differential Equations and Applications sounds quite natural The conference was organized by the Department of Mathematics of the University of Rostock and the Weierstrass Institute of Applied Analysis and Stochastics in Berlin on the occasion of his 60th birthday For many years Maz ya was connected with mathematicians from Berlin and Rostock through his work in potential theory in differential and pseudodifferential equations and in approximation theory In 1990 he was awarded an honorary doctorate by the University of Rostock Shortly before the meeting one of its organizers an outstanding mathematician and Maz ya's dear friend Siegfried Pröbldorf died This was a heavy loss for the and for the conference in particular During the German mathematical community meeting the rector of the University of Rostock Prof Wildenhain the director of the Weierstrass Institute Prof Sprekels and Prof Maz ya remembered S Pröbldorf very warmly The conference was attended by 109 mathematicians from 21 countries and the program included 24 invited lectures and 63 short communications **Steal This Book (50th Anniversary Edition)** Abbie Hoffman, 2021-09-14 Still Notorious Radical and Revolutionary 50 Years Later A survival guide from one of the greatest creative organizers of the 20th century now with a new foreword by co conspirator Lisa Fithian Throughout the 1960s and 70s Abbie Hoffman crisscrossed the country ferreting out alternative ways of getting by in America some illegal and all radical Causing scandals with its advice on how to Survive Fight and Liberate in the prison that is Amerika Steal This Book is a revolutionary's manual to running a guerilla movement as well as getting free food housing transportation medical care and more This anniversary edition gives a new generation an insider's view into the movements of the sixties and seventies While many of the holes in the system that Abbie exposed have since been plugged the spirit of revolution the dedication to opposing injustice and the passion of creative activism continue to inspire today Twentieth Anniversary Volume: Discrete & Computational Geometry Jacob E. Goodman, János Pach, Richard Pollack, 2009-03-02 While we were busy putting together the present collection of articles celebrating the twentieth birthday of our journal Discrete the complexity hardness of a variety of geometric algorithms depends on McMullen's upper bound theorem on convex polytopes or on the maximum number of halving lines determined by $2n$ points in the plane that is the number of different ways a set of points can be cut by a straight

line into two parts of the same size proximity questions stemming from several application areas turn out to be intimately related to Erdos's classical questions on the distribution of distances determined by n points in the plane or in space. On the other hand the algorithmic point of view has fertilized several fields of complexity and of discrete geometry which had lain fallow for some years and has opened new research directions.

The Gohberg Anniversary Collection Seymour Goldberg, Marinus A. Kaashoek, Peter Lancaster, 2012-12-06

In this article we shall use two special classes of reproducing kernel Hilbert spaces which originate in the work of de Branges and de Branges-Rovnyak respectively to solve matrix versions of a number of classical interpolation problems. En route we shall reinterpret de Branges' characterization of the first of these spaces when it is finite dimensional in terms of matrix equations of the Liapunov and Stein type and shall subsequently draw some general conclusions on rational $m \times m$ matrix valued functions which are J -unitary on either the circle or the line. We shall also make some connections with the notation of displacement rank which has been introduced and extensively studied by Kailath and a number of his colleagues as well as the one used by Heinig and Rost. The first of the two classes of spaces alluded to above is distinguished by a reproducing kernel of the special form $K(z, w) = J U(z, w) L^* L w$ in which J is a constant $m \times m$ signature matrix and U is an $m \times m$ J -inner matrix valued function over where is equal to either the open unit disc $\mathbb{D}$ or the open upper half plane $\mathbb{H}$ and P_w is defined in the table below.
