Megaphysics II; An Explanation of Nature Dr. Mitchell Wick, 2015-07-30 This book is a comprehensive mathematical exposition of how one inch long equation space time is directly proportional to space and inversely proportional to mass can be used to explain all phenomena of nature It explains the equation in terms of metric tensors and in terms of quantum mechanics and demonstrate how they equal each other and the equation of everything which in tensors is Riemannian 4 space Minkowski 3 space 1 2 space time curvature metric called gravity Ricci tensor of inertial mass all multiplied by $1/c^2$ or if substituting the Ricci Tensor c^2 by the energy density of matter completes the equation A new mathematical operator is introduced called the spiral operator which describes space time in black holes and the total curvature of the universe is mathematically determined Black energy and dark matter are shown how they interrelate and relate to what caused the big bang and there is a theory as to what occurred prior to the big bang Also a mathematical mechanism is given showing a rotational component in the quantum bubble prior to the big bang and how it fits with nature The book applies some comments made by other physicists about compactification rolled or curled up dimensions to show the compactified circle of Type IIa string theory can be applied to arc length as space time the radius as the sum of all Riemann Forces and the angle as space time curvature Relativity and cosmology are explained as well as quantum mechanics including the Schrodinger equation and how many more compactified dimensions can exist besides the postulated twenty six in string theory M Theory is also explained along with membranes and how they interrelate to energy and matter The Hawking paradox is solved using Schwarzschild space time and much more

How Mathematics Happened Peter S. Rudman, 2009-12-30 In this fascinating discussion of ancient mathematics author Peter Rudman does not just chronicle the archeological record of what mathematics was done he digs deeper into the more important question of why it was done in a particular way Why did the Egyptians use a bizarre method of expressing fractions Why did the Babylonians use an awkward number system based on multiples of 60 Rudman answers such intriguing questions arguing that some mathematical thinking is universal and timeless The similarity of the Babylonian and Mayan number systems two cultures widely separated in time and space illustrates the argument He then traces the evolution of number systems from finger counting in hunter gatherer cultures to pebble counting in herder farmer cultures of the Nile and Tigris Euphrates valleys which defined the number systems that continued to be used even after the invention of writing With separate chapters devoted to the remarkable Egyptian and Babylonian mathematics of the era from about 3500 to 2000 BCE when all of the basic arithmetic operations and even quadratic algebra became doable Rudman concludes his

interpretation of the archeological record Since some of the mathematics formerly credited to the Greeks is now known to be a prior Babylonian invention Rudman adds a chapter that discusses the math used by Pythagoras Eratosthenes and Hippasus which has Babylonian roots illustrating the watershed difference in abstraction and rigor that the Greeks introduced He also suggests that we might improve present day teaching by taking note of how the Greeks taught math Complete with sidebars offering recreational math brainteasers this engrossing discussion of the evolution of mathematics will appeal to both scholars and lay readers with an interest in mathematics and its history The Publishers Weekly ,1917 **The Publishers Weekly** ,1971-10 *The Crossword Answer Book* ,1996 The most comprehensive crossword reference the only one based on actual crosswords It s guaranteed to have more of the answers you re looking for Catalog of Copyright Entries.
