Adaptation Changements Climatiques Zones C Ti Res:

African Handbook of Climate Change Adaptation Nicholas Oguge, Desalegn Ayal, Lydia Adeleke, Izael da Silva, 2021-05-20
This open access book discusses current thinking and presents the main issues and challenges associated with climate change in Africa. It introduces evidences from studies and projects which show how climate change adaptation is being and may continue to be successfully implemented in African countries. Thanks to its scope and wide range of themes surrounding climate change the ambition is that this book will be a lead publication on the topic which may be regularly updated and hence capture further works. Climate change is a major global challenge. However some geographical regions are more severely affected than others. One of these regions is the African continent. Due to a combination of unfavourable socio economic and meteorological conditions African countries are particularly vulnerable to climate change and its impacts. The recently released IPCC special report Global Warming of 1.5°C outlines the fact that keeping global warming by the level of 1.5°C is possible but also suggested that an increase by 2.0°C could lead to crises with crops agriculture fed by rain could drop by 50% in some African countries by 2020 and livestock production could damage water supplies and pose an additional threat to coastal areas. The 5th Assessment Report produced by IPCC predicts that wheat may disappear from Africa by 2080 and that maize a staple will fall significantly in southern Africa. Also arid and semi arid lands are likely to increase by up to 8% with severe ramifications for livelihoods poverty eradication and meeting the SDGs. Pursuing appropriate adaptation strategies is thus vital in order to address the current and future challenges posed by a changing climate. It is against this background that the African Handbook of Climate Change Adaptation is being published. It contains papers prepared by scholars representatives from social movements practitioners and members of governmental agencies undertaking research and or executing climate change projects in Africa and working with communities across the African continent. Encompassing over 100 contributions from across Africa it is the most comprehensive publication on climate change adaptation in Africa ever produced.

Chapitre 2 - Incendies de forêt à l'heure de l'anthropocène : questions d'échelles Christine BOUISSET, 2021-09-01. Dans le contexte global de l'anthropocène les mégafeux attirent l'attention sur les recompositions du risque incendie. À plus grande échelle néanmoins la complexité et la multicausalité restent de mise pour sa compréhension. Le cas français montre combien l'intégration du changement climatique la prévention et la gestion des incendies entre en concurrence avec d'autres types de risque. Mots clés : incendies, territoires, échelles, vulnérabilité, pyroclastique. DOI 10.51926/ISTE.9041.ch2

Les risques et l'anthropocène Julien Rebotier, 2021-09-01. L'anthropocène est désormais le temps des défis environnementaux dans lesquels les sociétés se sont récemment plongées. Pour les sciences sociales l'anthropocène est un moment historique de possibles révolutions, celles des manières

Hausse du niveau des mers Les approches des pays de l'OCDE face aux risques côtiers OECD,2019-12-19 L'adaptation des zones côtières aux impacts du changement climatique est désormais une urgence La hausse du niveau des mers et des pressions immobilières va certainement y accroître les risques selon les prévisions En quoi les processus nationaux de planification de l'adaptation des pays de l'OCDE peuvent-ils nous aider à pondérer ce défi

Le tic-tac de l'horloge climatique Christian de Perthuis,2019-10-01 Pour contenir le réchauffement en dessous de 2 °C il faut changer les règles du jeu économique Les instruments utilisés concernent le climat mais aussi la justice sociale et les autres facettes de la crise environnementale Le recours aux énergies fossiles a été la source de la croissance du XX^e siècle et de ses impacts sur la planète La sortie du régime des fossiles sera la grande affaire du XXI^e siècle Cette transition énergétique a démarré mais elle ne met pas nos sociétés à l'abri du risque climatique En effet son rythme n'est pas en phase avec le tic-tac de l'horloge climatique et elle ne permet pas de faire face à l'appauvrissement du milieu naturel qui réduit sa capacité d'absorption du CO₂ Pour viser la neutralité carbone il convient d'opérer une double mutation accélérer la transition énergétique en désinvestissant des actifs liés aux énergies fossiles et protéger les puits de carbone terrestres et océaniques en investissant dans la diversité du vivant Il faut simultanément se préparer au durcissement des impacts du réchauffement inévitables compte tenu du trop plein de gaz effet de serre déjà accumulés dans l'atmosphère Au-delà des constats solidement documentés la thèse de l'auteur est que le changement climatique va contraindre nos sociétés à remettre en cause leurs modèles de croissance Pour opérer ces mutations il convient d'introduire une tarification carbone grande échelle et des normes contraignantes Pour mobiliser l'action du plus grand nombre ces nouvelles réglementations devront pondérer des critères rigoureux de justice climatique
