Objectives

How do the patterns of gene inheritance affect a pattern of inheritance?

Introduction

Most of your cells contain 22 pairs of homologous chromosomes. The homologous chromosomes are the identical structures that differentiate your body from other cells and are also your father's. These two chromosomes contain your genetic information, which governs how you, your children, and others will develop.

During meiosis, each daughter cell receives 22 pairs of chromosomes inherited from the parent cell. Each daughter cell is genetically different from the daughter cell because each receives a different combination of chromosomes from the parent cell. This is the basis of genetic inheritance. If the chromosomes are not inherited from the parent cell, the daughter cell will be genetically different from the parent cell.

Each cell also contains different combinations of chromosomes. The chromosomes contain the information that is
