Alchemy And Chemistry In The 16th And 17th Centuries:

Alchemy and Chemistry in the 16th and 17th Centuries P. Rattansi, Antonio Clericuzio, 2013-03-07 The present volume owes its origin to a Colloquium on Alchemy and Chemistry in the Sixteenth and Seventeenth Centuries held at the Warburg Institute on 26th and 27th July 1989 The Colloquium focused on a number of selected themes during a closely defined chronological interval on the relation of alchemy and chemistry to medicine philosophy religion and to the corpuscular philosophy in the sixteenth and seventeenth centuries The relations between Medicina and alchemy in the Lullian treatises were examined in the opening paper by Michela Pereira based on researches on unpublished manuscript sources in the period between the 14th and 17th centuries It is several decades since the researches of R F Multhauf gave a prominent role to Johannes de Rupescissa in linking medicine and alchemy through the concept of a quinta essentia Michela Pereira explores the significance of the Lullian tradition in this development and draws attention to the fact that the early Paracelsians had themselves recognized a family resemblance between the works of Paracelsus and Roger Bacon's scientia experimentalis and indeed a continuity with the Lullian tradition

The ^AChemical Philosophy of Robert Boyle Marina Paola Banchetti-Robino, 2020-07-01 The Chemical Philosophy of Robert Boyle examines the relationship between Robert Boyle's experimental work in chemistry and his commitment to mechanical philosophy *Theory Choice in the History of Chemical Practices* Emma Tobin, Chiara Ambrosio, 2016-05-26 This collection of essays examines the question of theory from the perspective of the history of chemistry Through the lens of a number of different periods the authors provide a historical analysis of the question of theory in the history of chemical practice The consensus picture that emerges is that the history of science tells us a much more complex story about theory choice A glimpse at scientific practice at the time shows that different competing as well as non competing theories were used in the context of the scientific practice at the various times and sometimes played a pivotal pedagogical role in training the next generation of chemists This brief brings together a history of chemical practice and in so doing reveals that theory choice is conceptually more problematic than was originally conceived This volume was produced as part of the Ad HOC chemistry research group hosted by University College London and University of Cambridge

The Cambridge Companion to Newton I. Bernard Cohen, George E. Smith, 2002-04-25 Sir Isaac Newton 1642 1727 was one of the greatest scientists of all time a thinker of extraordinary range and creativity who has left enduring legacies in mathematics and the natural sciences In this volume a team of distinguished contributors examine all the main aspects of Newton's thought including not only his approach to space time mechanics and universal gravity in his Principia his research in optics and his contributions to mathematics but also his more clandestine investigations into alchemy theology and prophecy which have sometimes been overshadowed by his mathematical and scientific interests

The Invention of Sustainability Paul Warde, 2018-07-12 A groundbreaking study of how sustainability became a social and political problem and how to think about it today **A Cultural History of Chemistry in the Early Modern Age** Bruce T.
