Microstrip Patch Antenna Learning using MATLAB. Theory and Implementation Jagadish

Jadhav,Alkeshkumar M Khatri,Pramod J Deore,2021-07-30 Scientific Study from the year 2021 in the subject Engineering Communication Technology course M Tech language English abstract Microstrip patch antenna is used to send onboard parameters of article to the ground while under operating conditions By the study of this book we find out how to investigate a new method of teaching microstrip patch antenna design for undergraduate students by using MATLAB Effect of changes

in basic parameter microstrip patch antenna on its radiation pattern and other parameters to study the effect of resonant frequency and substrate parameters like relative dielectric constant substrate thickness on the radiation parameters of bandwidth and physical dimension of the microstrip patch antenna can be determined by using GUI In this book we develop simple CAD GUI formulas that describe the basic properties of microstrip patch antenna using MATLAB By the usage of this teaching tool we can analyze the behaviour of the microstrip patch antenna and design of it for different material Satellite communication and wireless communication has been developed rapidly in the past decades and it has already a dramatic impact on human life In the last few years the development of wireless local area networks WLAN represented one of the principal interests in the information and communication field Thus the current trend in commercial and government communication systems has been to develop low cost minimal weight low profile antennas that are capable of maintaining high performance over a large spectrum of frequencies This technological trend has focused much effort into the design of microstrip patch antennas The variety in design that is possible with microstrip antenna probably exceeds that of any other type of antenna element In addition once the shape and operating mode of the patch are selected designs become very versatile in terms of operating frequency polarization pattern and impedance They are extremely low profile lightweight simple and inexpensive to fabricate using modern day printed circuit board technology compatible with microwave and millimeter wave integrated circuits MMIC and have the ability to conform to planar and non planar surfaces

Microstrip Patch Antennas (Second Edition) Kai Fong Lee, Kwai Man Luk, Hau Wah Lai, 2017-07-10 Microstrip patch antennas have become the favorite of antenna designers because of their versatility and having the advantages of planar profile ease of fabrication compatibility with integrated circuit technology and conformability with a shaped surface There is a need for graduate students and practicing engineers to gain an in depth understanding of this subject The first edition of this book published in 2011 was written with this purpose in mind This second edition contains approximately one third new materials The authors Prof KF Lee Prof KM Luk and Dr HW Lai have all made significant contributions in the field Prof Lee and Prof Luk are IEEE Fellows Prof Lee was the recipient of the 2009 John Kraus Antenna Award of the IEEE Antennas and Propagation Society while Prof Luk receives the same award in 2017 both in recognition of their contributions to wideband microstrip antennas

Frequency Selective Surfaces based High Performance Microstrip Antenna Shiv Narayan, B. Sangeetha, Rakesh Mohan Jha, 2015-09-24 This book focuses on performance enhancement of printed antennas using frequency selective surfaces FSS technology The growing demand of stealth technology in strategic areas requires high performance low RCS radar cross section antennas Such requirements may be accomplished by incorporating FSS into the antenna structure either in its ground plane or as the superstrate due to the filter characteristics of FSS structure In view of this a novel approach based on FSS technology is presented in this book to enhance the performance of printed antennas including out of band structural RCS reduction In this endeavor the EM design of microstrip patch antennas MPA loaded with

FSS based i high impedance surface HIS ground plane and ii the superstrates are discussed in detail The EM analysis of proposed FSS based antenna structures have been carried out using transmission line analogy in combination with the reciprocity theorem Further various types of novel FSS structures are considered in designing the HIS ground plane and superstrate for enhancing the MPA bandwidth and directivity The EM design and performance analyses of FSS based antennas are explained here with the appropriate expressions and illustrations
