Agent Intelligence Through Data Mining Andreas L. Symeonidis, Pericles A. Mitkas, 2005-07-15 This book addresses the use of data mining for smarter more efficient agents as well as the challenge of generating intelligence from data while transferring it to a separate possibly autonomous software entity Following a brief review of data mining and agent technology fields the book presents a methodology for developing multi agent systems describes available open source tools and demonstrates the application of the methodology on three different cases

Intelligent Agents for Data Mining and Information Retrieval Mohammadian, Masoud, 2003-07-01 There is a large increase in the amount of information available on World Wide Web and also in number of online databases This information abundance increases the complexity of locating relevant information Such a complexity drives the need for improved and intelligent systems for search and information retrieval Intelligent agents are currently used to improve the search and retrieval information on World Wide Web The use of existing search and retrieval engines with the addition of intelligent agents allows a more comprehensive search with a performance that can be measured Intelligent Agents for Data Mining and Information Retrieval discusses the foundation as well as the practical side of intelligent agents and their theory and applications for web data mining and information retrieval The book can be used for researchers at the undergraduate and post graduate levels as well as a reference of the state of art for cutting edge researchers

Agent Intelligence Through Data Mining Andreas L. Symeonidis, Pericles A. Mitkas, 2006-05-06 Knowledge hidden in voluminous data repositories routinely created and maintained by today's applications can be extracted by data mining The next step is to transform this discovered knowledge into the inference mechanisms or simply the behavior of agents and multi agent systems Agent Intelligence Through Data Mining addresses this issue as well as the arguable challenge of generating intelligence from data while transferring it to a separate possibly autonomous software entity This book contains a methodology tools and techniques and several examples of agent based applications developed with this approach This volume focuses mainly on the use of data mining for smarter more efficient agents Agent Intelligence Through Data Mining is designed for a professional audience of researchers and practitioners in industry This book is also suitable for graduate level students in computer science

Data Mining and Multi-agent Integration Longbing Cao, 2009-07-25 Data Mining and Multi agent Integration aims to reflect state of the art research and development of agent mining interaction and integration for short agent mining The book was motivated by increasing interest and work in the agents data mining and vice versa The interaction and integration comes about from the intrinsic challenges faced by agent technology and data mining respectively for instance multi agent systems face the problem of enhancing agent learning capability and avoiding the uncertainty of self organization and intelligence emergence Data mining if integrated into agent systems can greatly enhance the learning skills of agents and assist agents with predication of future states thus initiating follow up action or intervention The data mining community is now struggling with mining distributed interactive and heterogeneous data

sources Agents can be used to manage such data sources for data access monitoring integration and pattern merging from the infrastructure gateway message passing and pattern delivery perspectives These two examples illustrate the potential of agent mining in handling challenges in respective communities There is an excellent opportunity to create innovative dual agent mining interaction and integration technology tools and systems which will deliver results in one new technology
