Aquaculture And Behavior Published By Wiley Blackwell 2012:

Conservation Aquaculture Douglas Tave, 2025-02-11 Stocking hatchery produced fish has been a standard component of fisheries management for over 100 years This book discusses the production of hatchery fish used in aquaculture assisted fisheries programs to help stabilize and recover endangered species For the most part these programs have been unsuccessful and a reason why is that the traditional approach to fish culture produces fish that are genetically and behaviorally ill suited to help recover an imperiled species The hatchery environment and management used to culture the fish makes them sub viable in the wild Even if most of the augmented fish die survivors that mate with wild fish lower the fitness of the endangered population making the conservation program counter productive Since traditional aquaculture programs have been shown to produce fish that are ill suited to help recovery a new way of producing fish is needed That new way is conservation aquaculture In conservation aquaculture fish are raised in naturalized mesocosms that mimic the environment in which the endangered species lives Management is naturalized so domestication does not produce genetic changes and so fish develop a full and effective suite of behaviors that enable them to forage efficiently and detect and avoid predators when stocked The conservation aquaculture management techniques described in the book can also be used to improve commercial and recreational fish stocking programs

Welfare of Cultured and Experimental Fishes

Pablo Arechavala-Lopez, Joao Luis Saraiva, 2019-11-18 Welfare is a multidimensional concept that can be described as the state of an animal as it copes with the environment Captive environments can impact farmed animals at different levels especially fishes considering their highly complex sensory world Understanding the ethology of a species is therefore essential to address fish welfare and the interpretation of behavioral responses in specific rearing contexts aquaculture or experimental contexts demands knowledge of their underlying physiological developmental functional and evolutionary mechanisms In natural environments the stress response has evolved to help animals survive challenging conditions However

animals are adapted to deal with natural stressors while anthropogenic stimuli may represent stressors that fishes are unable to cope with Under such circumstances stress responses may be maladaptive and cause severe damage to the animal As welfare in captivity is affected in multiple dimensions multiple possible indicators can be used to assess the welfare state of individuals In the past research on welfare has been largely focusing on health indicators and predominantly based on physiological stress Ethological indicators however also integrate the mental perspective of the individual and have been gradually assuming an important role in welfare research behavioral responses to stressors are an early response to adverse conditions easily observable and demonstrative of emotional states Many behavioral indicators can be used as non invasive measurements of welfare in practical contexts such as aquaculture and experimentation Presently research in fish welfare is growing in importance and interest because of the growing economic importance of fish farming the comparative biology opportunities that experimental fishes provide and the increasing public sensitivity to welfare issues

Aquatic Animal Nutrition Christian E.W. Steinberg,2022-01-03 As sequel to Aquatic Animal Nutrition A Mechanistic Perspective from Individuals to Generations the present treatise on organic macro and micronutrients continues the unique cross fertilization of aquatic ecology ecophysiology and aquaculture This treatise considers proteins and their constituents carbohydrates from mono to polysaccharides fatty acids from free acids to fat and waxes It becomes obvious that these organic nutrients are more than only simple fuel for the metabolism of animals rather their constituents have messenger and controlling function for the actual consuming individual and even for succeeding generations This aspect will become particularly clear by putting the organisms under consideration back into their ecosystem with their interrelationships and interdependencies Furthermore micronutrients such as vitamins and nucleotides as well as exogenous enzymes are in the focus of this volume with known and still to be discovered controlling physiological and biomolecular functions Aquatic Animal Nutrition Organic Macro and Micro Nutrients addresses several gaps in nutritional research and practice One major gap is the lack of common research standards and protocols for nutritional studies so that virtually incomparable approaches have to be compared This applies also to the studied animals since most approaches disregard intraspecific variabilities and the existence of epimutations in farmed individuals Furthermore recalling the Mechanistic Perspective from Individuals to Generations dietary benefits and deficiencies have effects on succeeding generations In most studies this long term and sustainable aspect is overruled by pure short term production aspects By comparing nutritional behavior and success of fishes and invertebrates Aquatic Animal Nutrition points out different metabolic pathways in these animal groups and discusses how for instance fishes would benefit when having some successful metabolic pathway of invertebrates Application of novel genetic techniques will help turn this vision into reality However a widely missing link in the current nutritional research is epigenetics regarding transgenerational heritages of acquired morphological and physiological properties To increase public acceptance nutritional optimization of farmed animals based on this mechanism rather than genetical engineering appears promising

The Welfare of Fish Tore S. Kristiansen,Anders Fernö,Michail A. Pavlidis,Hans van de Vis,2020-07-01 This book investigates how fish experience their lives their amazing senses and abilities and how human actions impact their quality of life The authors examine the concept of fish welfare and the scientific knowledge behind the inclusion of fish within the moral circle and how this knowledge can change the way we treat fish in the future In many countries fish are already protected by animal welfare legislation in the same way as mammals but in practice there is still a major gap between how we ethically view these groups and how we actually treat them The poor treatment of fish represents a massive animal welfare problem in aquaculture and fisheries both in terms of the number of animals affected and the severity of the welfare issues Thanks to its interdisciplinary scope this

thought provoking book appeals to professionals academics and students in the fields of animal welfare cognition and physiology as well as fisheries and aquaculture management *Fish behaviour and welfare* Pablo Almazan Rueda,Rosario Martínez-Yáñez ,Ana C. Puella Cruz,2024-09-19 Fish welfare is currently one of the most important concerns in aquaculture and knowledge on how to improve fish welfare should be practical and implementable for all aquaculture farms The objective of this Research Topic is to extend the current knowledge on fish welfare and to identify more comprehensive and practical indicators of the existing standard for fish welfare that are easily more comprehensive and practical indicators in order to make it easy to implement on fish farms A secondary objective is to identify which welfare issues are most relevant It is important to mention that good fish welfare cannot simply be extrapolated from terrestrial animals It has to take into consideration that different species of fish must also be taken into consideration Whether these are species of commercial interest or not they have different behaviour and respond differently to stress and consequently require a species specific approach to improving their welfare Intensive fish production systems have important negative consequences for the animals including impaired health and erratic behaviour For many industries their main goal is to achieve higher production whilst majority of the time welfare is not take it into consideration Better conditions for intensively produced farm animals including fish should result in improved efficiency and performance and higher quality product for consumers We welcome papers demonstrating such effects This research topic is related to the welfare of farmed fish Fish welfare is related to how we treat our fish the type of feed how often we feed them the stocking density that it is used the environment where they are growing how we grow them from fertilized egg to fish ready to sell for public consumption This Research Topic should address fish welfare during the whole growth period and may also include papers on the attitudes and perceptions of stakeholders including fish farmers and public about fish welfare

Are We Pushing Animals to Their Biological Limits? Temple Grandin,Martin Whiting,2018-07-31 Stimulating and thought provoking this important new text looks at the welfare problems and philosophical and ethical issues that are caused by changes made to an animal s telos behaviour and physiology both positive and negative to make them more productive or adapted for human uses These changes may involve selective breeding for production appearance traits or competitive advantage in sport transgenic animals or the use of pharmaceuticals or hormones to enhance production or performance Changes may impose duties to care for these animals further and more intensely or they may make the animal more robust The book considers a wide range of animals including farm animals companion animals and laboratory animals It reviews the ethics and welfare issues of animals that have been adapted for sport as companions in work as ornaments food sources guarding and a whole host of other human functions This important new book sparks debate and is essential reading for all those involved in animal welfare and ethics including veterinarians animal scientists animal welfare scientists and ethologists
