

The background of the cover is an aerial photograph of a wetland or coastal landscape at sunset. The sun is a bright, glowing orb on the horizon, casting a long, shimmering reflection across the water. The landscape features a complex network of water channels, marshes, and islands. Overlaid on the lower half of the image is a 3D network diagram. This diagram consists of numerous yellow spherical nodes connected by thin, light blue lines. The nodes are arranged in a somewhat layered fashion, with some appearing closer to the viewer than others. The overall composition suggests a connection between natural ecosystems and complex network theory.

Aquatic Functional Biodiversity An Ecological And Evolutionary Perspective:

Aquatic Functional Biodiversity Andrea Belgrano, Guy Woodward, Ute Jacob, 2015-07-25 Aquatic Functional Biodiversity An Ecological and Evolutionary Perspective provides a general conceptual framework by some of the most prominent investigators in the field for how to link eco evolutionary approaches with functional diversity to understand and conserve the provisioning of ecosystem services in aquatic systems Rather than producing another methodological book the editors and authors primarily concentrate on defining common grounds connecting conceptual frameworks and providing examples by a more detailed discussion of a few empirical studies and projects which illustrate key ideas and an outline of potential future directions and challenges that are expected in this interdisciplinary research field Recent years have seen an explosion of interest in using network approaches to disentangle the relationship between biodiversity community structure and functioning Novel methods for model construction are being developed constantly and modern methods allow for the inclusion of almost any type of explanatory variable that can be correlated either with biodiversity or ecosystem functioning As a result these models have been widely used in ecology conservation and eco evolutionary biology Nevertheless there remains a considerable gap on how well these approaches are feasible to understand the mechanisms on how biodiversity constrains the provisioning of ecosystem services Defines common theoretical grounds in terms of terminology and conceptual issues Connects theory and practice in ecology and eco evolutionary sciences Provides examples for successful biodiversity conservation and ecosystem service management

Perspectives on Global Biodiversity Scenarios and Environmental Services in the 21st Century Chourasia, Naveen Kumar, Chahal, Kavita, 2023-11-01 Quantitative models are increasingly being used to assess the impact of socioeconomic development pathways on biodiversity and environmental services Regardless of the scenario the decline of biodiversity will continue throughout the 21st century Land use changes drive biodiversity changes in terrestrial systems while overfishing drives changes in marine systems and climate change affects all realms The loss of habitats will lead to local population decreases and global extinctions will occur at unpredictable rates due to the lag between environmental changes and their effects To address this we need to focus more on the relationship between the decline of ecosystem services and the position of species responsible for that function in the trophic hierarchy Perspectives on Global Biodiversity Scenarios and Environmental Services in the 21st Century makes biodiversity scenarios understandable relevant and valuable to stakeholders by using effective language and focused communication techniques Instead of merely showing the potential effects of global change on biodiversity scenarios should consider the feedback connecting environmental forces Biodiversity provides numerous essential environmental services crucial to human well being both now and in the future The climate is a critical component of ecosystem functioning and directly and indirectly affects human health The target audience includes biology and environmental science students and faculty scientists social workers who generate and collaborate on biodiversity scenarios policymakers and corporations with a

Water Science, Policy and Management Simon James Dadson, Dustin E. Garrick, Edmund C. Penning-Rowsell, Jim W. Hall, Rob Hope, Jocelyne Hughes, 2020-01-07. Provides an in-depth look at science policy and management in the water sector across the globe. Sustainable water management is an increasingly complex challenge and policy priority facing global society. This book examines how governments, municipalities, corporations, and individuals find sustainable water management pathways across competing priorities of water for ecosystems, food, energy, economic growth, and human consumption. It looks at the current politics and economics behind the management of our freshwater ecosystems and infrastructure and offers insightful essays that help stimulate more intense and informed debate about the subject and its need for local and international cooperation. This book celebrates the 15-year anniversary of Oxford University's MSc course in Water Science, Policy and Management. Edited and written by some of the leading minds in the field, writing alongside alumni from the course. **Water Science, Policy and Management: A Global Challenge** offers in-depth chapters in three parts. Science, Policy and Management Topics cover hydroclimatic extremes and climate change, the past, present, and future of groundwater resources, water quality, modelling, monitoring, and management, and challenges for freshwater ecosystems. The book presents critical views on the monitoring and modelling of hydrological processes, the rural water policy in Africa and Asia, the political economy of wastewater in Europe, drought policy, management, and water allocation. It also examines the financing of water infrastructure, the value of wastewater, water resource planning, sustainable urban water supply, and the human right to water. Features perspectives from some of the world's leading experts on water policy and management. Identifies and addresses current and future water sector challenges. Charts water policy trends across a rapidly evolving set of challenges in a variety of global areas. Covers the reallocation of water policy, process of risk management, the future of the
