

Using the Hemocytometer

LAB

Learning Objectives

- 1. Calculate cell concentration from hemocytometer counts of a cell suspension.
- 2. Calculate % of cells in a population of a mixture based on counting cells in specific cell populations.

Background

Hemocytometers are the standard instruments used to measure cell concentration. Hemocytometers consist of two glass slides. The upper chamber of a hemocytometer is divided into four large square chambers. Each large square chamber is further divided into 16 smaller square chambers. Each small square chamber is 1 mm² in area. The depth of the chamber is 0.1 mm. The volume of each small square chamber is 0.1 mm³.

The hemocytometer is used to count cells in a suspension. The cells are counted in the small square chambers. The number of cells counted in each small square chamber is multiplied by the volume of the chamber (0.1 mm³) to give the number of cells in that chamber. The number of cells in each of the four large square chambers is then averaged to give the average number of cells per small square chamber. This average number is then multiplied by 10 to give the number of cells per mm³ of suspension.

Part A: Sample Counting Technique

Counting cells with the hemocytometer is a two-step process. The first step is to count the cells in the small square chambers.

Using the Hemocytometer

There are three basic steps to using the hemocytometer. The first step is to prepare a cell suspension. The second step is to load the hemocytometer with the cell suspension. The third step is to count the cells in the small square chambers.

7 12 parallel lines transversals and proportionality - Sep 25 2022

web nov 28 2020 theorem if two or more parallel lines are cut by two transversals then they divide the transversals proportionally figure pageindex 1 if $l \parallel m \parallel n$ then $\frac{a}{b} = \frac{c}{d}$ or $\frac{a}{c} = \frac{b}{d}$ note that this theorem works for any number of parallel lines with any number of transversals when

proportional segments between parallel lines math videos by - Jun 03 2023

web concept 1 when a line is drawn parallel to one side in a triangle two similar triangles are formed because corresponding angles yield the AA similarity shortcut because the triangles are similar the segments formed by the parallel line are proportional segments

proof parallel lines divide triangle sides proportionally khan academy - Apr 01 2023

web video transcript instructor we re asked to prove that if a line is parallel to one side of a triangle then it divides the other two sides proportionally so pause this video and see if you can do that and you might wanna leverage

parallel lines and transversals read geometry - May 22 2022

web jul 18 2012 the triangle proportionality theorem states that if a line parallel to one side of a triangle intersects the other two sides then it divides those sides proportionally we can extend this theorem to a situation outside of triangles where we have multiple parallel lines cut by transversals
