A Shadow on the Glass Ian Irvine, 2009-09-26 With this stunning and original debut Ian Irvine begins the saga of The View from the Mirror a brilliant epic fantasy that rivals the works of Robert Jordan and J V Jones Once there were three worlds each with its own human race Then fleeing from out of the void came a fourth race the Charon Desperate on the edge of extinction they changed the balance between the worlds forever The Tale of the Forbidding In ancient times the Way Between the Worlds was shattered leaving bands of Aachim Faellem and Charon trapped with the old humans of Santhenar Now Llian a Chronicler of the Great Tales uncovers a 3 000 year old secret too deadly to be revealed while Karan a young sensitive is compelled by honor to undertake a perilous mission Neither can imagine they will soon meet as hunted fugitives snared in the machinations of immortals the vengeance of warlords and the magics of powerful mancers For the swelling deluge of a millennial war is rising terrible as a tsunami ready to cast torrents of sorcery and devastation across the land

Understanding the Universe James B. Seaborn, 2012-12-06 For the last eighteen years I have been teaching an introductory course in astrophysics The course is intended for nonscience majors satisfying a general education requirement in natural science It is a

physics course with applications in astronomy The only prerequisite is the high school mathematics required for admission to the university For a number of years I used an astronomy text which I supplemented with lecture notes on physics There are many good astronomy texts available but this was not a satisfactory state of affairs since the course is a physics course The students needed a physics text that focused on astronomical applications Over the last few years I have developed a text which my students have been using in manuscript form in this course This book is an outgrowth of that effort The purpose of the book is to develop the physics that describes the behavior of matter here on the earth and use it to try to understand the things that are seen in the heavens Following a brief discussion of the history of astronomy from the Greeks through the Copernican Revolution we begin to develop the physics needed to understand three important problems at a level accessible to undergraduate nonscience majors 1 the solar system 2 the structure and evolution of stars and 3 the early universe All of these are related to the fundamental problem of how matter and energy behave in space and time *An easy introduction to astronomy for young gentlemen and ladies ...
