PANTHEON

Some things were Greek to the Greeks. In the fifth century B.C., Zeno of Elea argued that a man could never cross a river as long as he was at the bank.

How so?

To order to reach the bank he would have first to cross half the river, and then half the remaining distance again, and then half the distance that remains. This process, Zeno claims, is an argument still current in human history before it seems fails to impress the listener. You always go forward and can never be rested. But an infinite process requires an infinite amount of time for its completion, no? So one might think, a journey is, after all, something that takes place in time. But the plain fact is that a sequence of compressing these infinite steps into a finite walk has no end of the river to the other; that sort of thing we do with ease. As a matter of fact, it is in conflict with an inescapable fact.

A Tour Of The Calculus Berlinski First Edition Hardcover:

A Tour of the Calculus David Berlinski, 2011-04-27 Were it not for the calculus mathematicians would have no way to describe the acceleration of a motorcycle or the effect of gravity on thrown balls and distant planets or to prove that a man could cross a room and eventually touch the opposite wall Just how calculus makes these things possible and in doing so finds a correspondence between real numbers and the real world is the subject of this dazzling book by a writer of extraordinary clarity and stylistic brio Even as he initiates us into the mysteries of real numbers functions and limits Berlinski explores the furthest implications of his subject revealing how the calculus reconciles the precision of numbers with the fluidity of the changing universe An odd and tantalizing book by a writer who takes immense pleasure in this great mathematical tool and tries to create it in others New York Times Book Review Standard Catalog for High School Libraries H.W.
