Agent Based Computational Economics Using Netlogo:

Agent-Based Computational Economics Using NetLogo Romulus-Catalin Damaceanu, 2013-02-01 Agent based Computational Economics using NetLogo explores how researchers can create use and implement multi agent computational models in Economics by using NetLogo software platform Problems of economic science can be solved using multi agent modelling MAM This technique uses a computer model to simulate the actions and interactions of autonomous entities in a network in order to analyze the effects on the entire economic system MAM combines elements of game theory complex systems emergence and evolutionary programming The Monte Carlo method is also used in this e book to introduce random elements The 11 models presented in this text simulate the simultaneous operations of several agents in an attempt to recreate and predict complex economic phenomena This e book explains the topic in a systematic manner starting with an introduction for readers followed subsequently by methodology and implementation using NetLogo The volume ends with conclusions based on the results of the experiments presented The e book is intended as a concise and vital resource for economists applied mathematicians social sciences scientists systems analysts operations researchers and numerical analysts

Agent-based Computational Economics Using Netlogo, 2013 [Agent-Based Computational Economics](#) Shu-Heng Chen, 2017-09-19 This book aims to answer two questions that are fundamental to the study of agent based economic models what is agent based computational economics and why do we need agent based economic modelling of economy This book provides a review of the development of agent based computational economics ACE from a perspective on how artificial economic agents are designed under the influences of complex sciences experimental economics artificial intelligence evolutionary biology psychology anthropology and neuroscience This book begins with a historical review of ACE by tracing its origins From a modelling viewpoint ACE brings truly decentralized procedures into market analysis from a single market to the whole economy This book also reviews how experimental economics and artificial intelligence have shaped the development of ACE For the former the book discusses how ACE models can be used to analyse the economic consequences of cognitive capacity personality and cultural inheritance For the latter the book covers the various tools used to construct artificial adaptive agents including reinforcement learning fuzzy decision rules neural networks and evolutionary computation This book will be of interest to graduate students researching computational economics experimental economics behavioural economics and research methodology *Industry And Labor Dynamics: The Agent-based Computational Economics Approach - Proceedings Of The Wild@ace 2003 Workshop* Matteo Richiardi, Roberto Leombruni, 2004-11-22 This book presents the contributions to the first Wild Ace conference The acronym stands for Workshop on Industrial and Labor Dynamics The Agent Based Computational Approach and it has been the first event ever focusing on the very promising use of the agent based simulation approach for investigation of labor economics and industrial organization issues Agent based models are computer models in which a multitude of agents each embodied in a specific software code interact These agents

can represent individuals households firms institutions etc Moreover special agents can be added to observe and monitor individual and collective behavior One of the main purpose of writing an ACE model is to gain intuitions on the two way feedback between the microstructure and the macrostructure of a phenomenon of interest How is it that simple aggregate regularities may arise from individual disorder Or that a nice structure at an individual level may lead to a complete absence of regularity in the aggregate How is it that the complex interaction of very simple individuals may lead to surprisingly complicated aggregate dynamics Or that sophisticated agents may be unable to organize themselves in any interesting way The book includes contributions by some of the most distinguished researchers in the field such as the economists Alan Kirman Giovanni Dosi Leigh Tesfatsion and Mauro Gallegati and the sociologist Nigel Gilbert

Computational Economics: Heterogeneous Agent Modeling Cars Hommes, Blake LeBaron, 2018-06-27 Handbook of Computational Economics Heterogeneous Agent Modeling Volume Four focuses on heterogeneous agent models emphasizing recent advances in macroeconomics including DSGE finance empirical validation and experiments networks and related applications Capturing the advances made since the publication of Volume Two Tesfatsion Judd 2006 it provides high level literature with sections devoted to Macroeconomics Finance Empirical Validation and Experiments Networks and other applications including Innovation Diffusion in Heterogeneous Populations Market Design and Electricity Markets and a final section on Perspectives on Heterogeneity Helps readers fully understand the dynamic properties of realistically rendered economic systems Emphasizes detailed specifications of structural conditions institutional arrangements and behavioral dispositions Provides broad assessments that can lead researchers to recognize new synergies and opportunities

Agent-Based Modelling in Economics Lynne Hamill, Nigel Gilbert, 2016-01-19 Agent based modelling in economics Lynne Hamill and Nigel Gilbert Centre for Research in Social Simulation CRESS University of Surrey UK New methods of economic modelling have been sought as a result of the global economic downturn in 2008 This unique book highlights the benefits of an agent based modelling ABM approach It demonstrates how ABM can easily handle complexity heterogeneous people households and firms interacting dynamically Unlike traditional methods ABM does not require people or firms to optimise or economic systems to reach equilibrium ABM offers a way to link micro foundations directly to the macro situation Key features Introduces the concept of agent based modelling and shows how it differs from existing approaches Provides a theoretical and methodological rationale for using ABM in economics along with practical advice on how to design and create the models Each chapter starts with a short summary of the relevant economic theory and then shows how to apply ABM Explores both topics covered in basic economics textbooks and current important policy themes unemployment exchange rates banking and environmental issues Describes the models in pseudocode enabling the reader to develop programs in their chosen language Supported by a website featuring the NetLogo models described in the book Agent based Modelling in Economics provides students and researchers with the skills to design implement and analyze agent based models Third year undergraduate

master and doctoral students faculty and professional economists will find this book an invaluable resource **Applied Computational Mathematics in Social Sciences** Romulus-Catalin Damaceanu,2010 Applied Computational Mathematics in Social Sciences adopts a modern scientific approach that combines knowledge from mathematical modeling with various aspects of social science Special algorithms can be created to simulate an artificial society and a detailed analysis can subsequently be used to project social realities This Ebook specifically deals with computations using the NetLogo platform and is intended for researchers interested in advanced human geography and mathematical modeling studies

Agent-Based and Individual-Based Modeling Steven F. Railsback,Volker Grimm,2025-06-03 The essential textbook on agent based modeling now fully updated and expanded Agent Based and Individual Based Modeling has become the standard textbook on the subject for classroom use and self instruction Drawing on the latest version of NetLogo and fully updated with new examples exercises and an enhanced text for easier comprehension this is the essential resource for anyone seeking to understand how the dynamics of biological social and other complex systems arise from the characteristics of the agents that make up these systems Steven Railsback and Volker Grimm lead students stepwise through the processes of designing programming documenting and doing scientific research with agent based models focusing on the adaptive behaviors that make these models necessary They cover the fundamentals of modeling and model analysis introduce key modeling concepts and demonstrate how to implement them using NetLogo They also address pattern oriented modeling an invaluable strategy for modeling real world problems and developing theory This accessible and authoritative book focuses on modeling as a tool for understanding real complex systems It explains how to pose a specific question use observations from actual systems to design models write and test software and more A hands on introduction that guides students from conceptual design to computer implementation to analysis Filled with new examples and exercises and compatible with the latest version of NetLogo Ideal for students and researchers across the natural and social sciences Written by two leading practitioners Supported by extensive instructional materials at www.railsback.grimm.abm.book.com **Handbook of Computational**

Economics Leigh Tesfatsion,Kenneth L. Judd,2006-05-15 The explosive growth in computational power over the past several decades offers new tools and opportunities for economists This handbook volume surveys recent research on Agent based Computational Economics ACE the computational study of economic processes modeled as dynamic systems of interacting agents Empirical referents for agents in ACE models can range from individuals or social groups with learning capabilities to physical world features with no cognitive function Topics covered include learning empirical validation network economics social dynamics financial markets innovation and technological change organizations market design automated markets and trading agents political economy social ecological systems computational laboratory development and general methodological issues Every volume contains contributions from leading researchers Each Handbook presents an accurate self contained survey of a particular topic The series provides comprehensive and accessible surveys Artificial Economics

Ruben Mercado, 2021-11-04 This introductory overview explores the methods models and interdisciplinary links of artificial economics a new way of doing economics in which the interactions of artificial economic agents are computationally simulated to study their individual and group behavior patterns Conceptually and intuitively and with simple examples Mercado addresses the differences between the basic assumptions and methods of artificial economics and those of mainstream economics He goes on to explore various disciplines from which the concepts and methods of artificial economics originate for example cognitive science neuroscience artificial intelligence evolutionary science and complexity science Introductory discussions on several controversial issues are offered such as the application of the concepts of evolution and complexity in economics and the relationship between artificial intelligence and the philosophies of mind This is one of the first books to fully address artificial economics emphasizing its interdisciplinary links and presenting in a balanced way its occasionally controversial aspects

Agent Based Computational Economics Using Netlogo Book Review: Unveiling the Power of Words
