Optimization of EOQ Model with Limited Storage Capacity by Neutrosophic Geometric Programming Bappa Mondal, Chaitali Kar, Arindam Garai, Tapan Kumar Roy, In this article we present deterministic single objective economic order quantity model with limited storage capacity in neutrosophic environment We consider variable limit production cost and time dependent holding cost into account Here we minimize total average cost of proposed model by applying neutrosophic geometric programming which is obtained by extending existing fuzzy and intuitionistic fuzzy geometric programming for solving resultant non linear optimization model Next we consider numerical application to show that optimal solution obtained by neutrosophic geometric programming is more desirable than that of crisp fuzzy and intuitionistic fuzzy geometric programming Also we perform sensitivity analysis of parameters and present key managerial insights Finally we draw the conclusions

The Turbulence Problem Michael Eckert, 2019-10-05 On the road toward a history of turbulence this book focuses on what the actors in this research field have identified as the turbulence problem Turbulent flow rose to prominence as one of the most persistent challenges in science At different times and in different social and disciplinary settings the nature of this problem has changed in response to changing research agendas This book does not seek to provide a comprehensive account but instead an exemplary exposition on the environments in which problems become the subjects of research agendas with particular emphasis on the first half of the 20th century

Neutrosophic Sets and Systems: An International Book Series in Information Science and Engineering, vol. 22 / 2018 Florentin Smarandache, Said Broumi, 2018 Neutrosophic Sets and Systems has been created for publications on advanced studies in neutrosophy neutrosophic set neutrosophic logic neutrosophic probability neutrosophic statistics that started in 1995 and their applications in any field such as the neutrosophic structures developed in algebra geometry topology etc

Big Data-driven World: Legislation Issues and Control Technologies Alla G. Kravets, 2018-09-22 This book examines the methodological foundations of the Big Data driven world formulates its concept within the frameworks of modern control methods and theories and approaches the peculiarities of Control Technologies as a specific sphere of the Big Data driven world distinguished in the modern Digital Economy The book studies the genesis of mathematical and information methods transition from data analysis processing to knowledge discovery and predictive analytics in the 21st century In addition it analyzes the conditions of development and implementation of Big Data analysis approaches in investigative activities and determines the role and meaning of global networks as platforms for the establishment of legislation and regulations in the Big Data driven world The book examines that world through the prism of Legislation Issues substantiate the scientific and methodological approaches to studying modern mechanisms of terrorism and extremism counteraction in the conditions of new challenges of dissemination and accessibility of socially dangerous information Systematization of successful experience of the Big Data solutions implementation in the different countries and

analyze causal connections of the Digital Economy formation from the positions of new technological challenges is performed. The book's target audience includes scientists, students, PhD and Master students who conduct scientific research on the topic of Big Data not only in the field of IT data science but also in connection with legislative regulation aspects of the modern information society. It also includes practitioners and experts as well as state authorities and representatives of international organizations interested in creating mechanisms for implementing Digital Economy projects in the Big Data driven world.

[The Proper Generalized Decomposition for Advanced Numerical Simulations](#) Francisco Chinesta, Roland Keunings, Adrien Leygue, 2013-10-08. Many problems in scientific computing are intractable with classical numerical techniques. These fail, for example, in the solution of high dimensional models due to the exponential increase of the number of degrees of freedom. Recently, the authors of this book and their collaborators have developed a novel technique called Proper Generalized Decomposition (PGD) that has proven to be a significant step forward. The PGD builds by means of a successive enrichment strategy a numerical approximation of the unknown fields in a separated form. Although first introduced and successfully demonstrated in the context of high dimensional problems, the PGD allows for a completely new approach for addressing more standard problems in science and engineering. Indeed, many challenging problems can be efficiently cast into a multi-dimensional framework, thus opening entirely new solution strategies in the PGD framework. For instance, the material parameters and boundary conditions appearing in a particular mathematical model can be regarded as extra coordinates of the problem in addition to the usual coordinates such as space and time. In the PGD framework, this enriched model is solved only once to yield a parametric solution that includes all particular solutions for specific values of the parameters. The PGD has now attracted the attention of a large number of research groups worldwide. The present text is the first available book describing the PGD. It provides a very readable and practical introduction that allows the reader to quickly grasp the main features of the method. Throughout the book, the PGD is applied to problems of increasing complexity, and the methodology is illustrated by means of carefully selected numerical examples. Moreover, the reader has free access to the Matlab software used to generate these examples.

[Spectral and High Order Methods for Partial Differential Equations ICOSAHOME 2018](#) Spencer J. Sherwin, David Moxey, Joaquim Peiró, Peter E. Vincent, Christoph Schwab, 2020-08-11. This open access book features a selection of high quality papers from the presentations at the International Conference on Spectral and High Order Methods 2018, offering an overview of the depth and breadth of the activities within this important research area. The carefully reviewed papers provide a snapshot of the state of the art, while the extensive bibliography helps initiate new research directions.

Automated Configuration Problem Solving Charles J. Petrie, 2012-06-15. Automated Configuration has long been the subject of intensive research, especially in Artificial Intelligence. It is a pervasive problem to be solved, and it is a good test of various knowledge representation and reasoning techniques. The problem shows up in applications such as various electrical circuit design, utility computing, and even concurrent engineering. Automated

Configuration Problem Solving defines the ubiquitous problem illustrates the various solution techniques and includes a survey using these techniques from the mid 70 s until the mid 90 s During this time various general approaches were developed and then become more specialized This book covers the development of the general problem solving techniques for automated configuration which are based on both published academic work and patents **Emerging Issues in**

Ecology and Environmental Science Tanu Jindal,2018-10-13 This book consists of full research papers submitted by scientists faculty research scholars who attended the conference on Earth and Environment Pollution and Prevention held at Amity University Noida from January 28 30 2014 and had their abstracts published in the conference proceedings The selected contributions mainly address contemporary issues related to environmental contamination such as industrial wastewater characterization and treatment microplastics temporal mount of air pollutants atmospheric EC ecofriendly catalytic technology for textile waste dairy industry waste water treatment industrial air pollution and plant isoprene emissions The eight studies in the book will be of interest to environmental pollution researchers and students as well as scientists interested in the proceedings from the Earth and Environment Pollution and Prevention meeting **Governing**

Metropolitan Transport Simone Buseti,2015-02-04 This book investigates the link between institutions and public policies with specific reference to transport It opens by examining the main arguments for the establishment of metropolitan transport authorities The potential impacts of institutional change on the policy efficiency of institutions are then examined Key problems for institutional designers are identified showing how they can hamper the achievement of desired policy outcomes through institutional solutions Two in depth case studies on institutional change in metropolitan transport in London and Barcelona are presented with a view to testing the aforementioned hypotheses and providing insights into the ways in which the two transport institutions were reformed The concluding chapter identifies lessons for institutional designers and highlights the policy results that may be expected from the constitution of metropolitan transport authorities

Data Science for Social Good Massimo Lapucci,Ciro Cattuto,2021-10-13 This book is a collection of reflections by thought leaders at first mover organizations in the exploding field of Data Science for Social Good meant as the application of knowledge from computer science complex systems and computational social science to challenges such as humanitarian response public health sustainable development The book provides both an overview of scientific approaches to social impact identifying a social need targeting an intervention measuring impact and the complementary perspective of funders and philanthropies that are pushing forward this new sector This book will appeal to students and researchers in the rapidly growing field of data science for social impact to data scientists at companies whose data could be used to generate more public value and to decision makers at nonprofits foundations and agencies that are designing their own agenda around data
