African Cultural Astronomy Jarita Holbrook, R. Thebe Medupe, Johnson O. Urama, 2008-01-01 This is the first scholarly collection of articles focused on the cultural astronomy of Africans It weaves together astronomy anthropology and Africa and it includes African myths and legends about the sky alignments to celestial bodies found at archaeological sites and at places of worship rock art with celestial imagery and scientific thinking revealed in local astronomy traditions including ethnomathematics and the creation of calendars Authors include astronomers Kim Malville Johnson Urama and Thebe Medupe archaeologist Felix

Chami and geographer Michael Bonine and many new authors As an emerging subfield of cultural astronomy African cultural astronomy researchers are focused on training students specifically for doing research in Africa The first part of the volume contains lessons and exercises to help the beginning student of African cultural astronomy Included are exercises in archaeoastronomy cultural anthropology and naked eye astronomy penned by authors who use these regularly use these methods for their research This collection of lessons and research papers provides a foundation for the cultural astronomy researcher interested in doing work in Africa

Handbook of College Science Teaching Joel J. Mintzes, 2006 The Handbook offers models of teaching and learning that go beyond the typical lecture laboratory format and provides rationales for new practices in the college classroom It is ideal for graduate teaching assistants senior faculty and graduate coordinators and mid career professors in search of reinvigoration

Resources in Education ,1988 Active Learning in College Science Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naive notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these

ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for *Teaching and Learning Astronomy* Jay Pasachoff, John Percy, 2005-12-15 Astronomy is taught in schools worldwide but few schoolteachers have any background in astronomy or astronomy teaching and available resources may be insufficient or non existent This volume highlights the many places for astronomy in the curriculum relevant education research and best practice strategies for pre service and in service teacher education the use of the Internet and other technologies and the role that planetariums observatories science centres and organisations of professional and amateur astronomers can play The special needs of developing countries and other under resourced areas are also highlighted The book concludes by addressing how the teaching and learning of astronomy can be improved worldwide This valuable overview is based on papers and posters presented by experts at a Special Session of the International Astronomical Union **Announcer** ,2004 *A Guide to Undergraduate Science Course and Laboratory Improvements* National Science Foundation (U.S.).
