modern Euro American society prototype as an allegedly unified concept of culture evolution and replacement as a generalizing signifier for the exchange of old items for new ones The working of cultural memory is understood as the storage capacity of items of knowledge relating to the past present and future according to parameters of experienced rather than absolute time This study discusses a wide selection of the variables shaping the foundations and fabric of culture starting with the human capacities for symbol making and using sign systems The impact of knowledge construction on the culture process is articulated in 30 postulates concerning the dynamics of communal life and patterns of sustenance the relationship between the natural environment and cultural space and the life cycle of cultures
