Integrating Women Into the Astronaut Corps Amy E.

Foster, 2011-12 Why Amy E Foster asks did it take two decades after the Soviet Union launched its first female cosmonaut for the United States to send its first female astronaut into space In answering this question Foster recounts the complicated history of integrating women into NASA's astronaut corps NASA selected its first six female astronauts in 1978 Foster examines the political technological and cultural challenges that the agency had to overcome to usher in this new era in spaceflight She shows how NASA had long developed progressive hiring policies but was limited in executing them by a national agenda to beat the Soviets to the moon budget constraints and cultural ideas about women's roles in America Lively writing and compelling stories including personal interviews with America's first women astronauts propel Foster's account Through extensive archival research Foster also examines NASA's directives about sexual discrimination the technological issues in integrating women into the corps and the popular media's discussion of women in space Foster puts together a truly original study of the experiences not only of early women astronauts but also of the managers and engineers who helped launch them into space In documenting these events Foster offers a broader understanding of the difficulties in sexually integrating any workplace even when the organization approaches the situation with as positive an outlook and as strong a motivation as did NASA

Diversity, Equity, and Inclusion in Astronomy Jörg Matthias Determann, 2023-11-14 Astronomy is a field concerned with matters very distant from Earth. Most phenomena, whether observed or theorized, transcend human spaces and timescales by orders of magnitude. Yet many scientists have been interested not just in the events that have occurred millennia before Earth's inception but also in their very own society here and now. Since the first half of the twentieth century, an increasing number of them have pursued parallel careers as both academics and activists. Besides publishing peer-reviewed papers, they have promoted a great variety of underrepresented groups within their discipline. Through conferences, newsletters, and social media, they have sought to advance the interests of women, members of racial and ethnic minorities, LGBTQ, and disabled people. While these activists have differed in the identities they focus on, they have come to share a conviction that diversity and inclusion are crucial for scientific excellence as well as social justice. In this book, you will read of the biographies and institutional contexts of key agents in the diversification of modern astronomy. As most are recent figures whose discoveries have not been commemorated by Nobel Prizes, they are relatively unknown among historians of science. They have, however, been central to discussions about who has privileged access to the tools of astronomical inquiry, including powerful telescopes and extensive databases. As such, they have also significantly shaped views of our universe.

Learning Like a Girl Diana Meehan, 2007-05-22 Faced with a spirited eleven-year-old daughter, a concern about what therapists have called a poisonous youth culture, especially for girls, and a conviction that parents need powerful tools to help their daughters realize their potential, educator/activist Diana Meehan was disappointed in the selection of schools available. So she decided, along with two other mothers, to create one based on social science and brain research on how girls learn best. The result, The Archer School in L.A., has in only ten years become a model for girls' schools nationwide. In this entertaining, inspiring book, Meehan describes her obstacle-ridden journey to create a new institution to serve girls first and foremost, while laying out, through vivid stories and examples, what girls need to thrive. She explains why co-education so often doesn't serve them just as it doesn't serve boys, takes sides in the controversy over male/female learning differences, and advocates for schools' role in giving girls tools to navigate through our sexualized, materialistic culture. She also visits other schools around the country, private and public, to show how single-sex education works and how every girl everywhere can benefit from having a classroom of her own.

Learning to Succeed in Science Saima Salehjee, Mike Watts, 2023-06-29 This book offers a positive and compelling exploration of how young South Asian women can be encouraged to study science further and to consider STEM as a career. Drawing together both intersectional and personal perspectives, the book celebrates South Asian culture, sharing the stories of these individuals, their multifaceted identities, aspirations, and successes. At the micro level, an intersectional analysis reveals complicated identity negotiations of being young, female, a science-orientated student, immigrant, Muslim, a daughter, and a sister, as well as how these identities might

interact nest and shift The chapters build on the authors previous work in science education developing models of science identity Sci ID and women s engagement with the study of science and their aspirations for a science based career
