ABC Proteins I Barry Holland, Susan P. C. Cole, Karl Kuchler, Christopher F. Higgins, 2003-01-07 ABC Proteins is an in depth up to date analysis of all that is known about the subject to date It discusses and compares evolution biology and mechanism of action of all known ABC proteins including the first structural studies as well as clinical implications It will be useful to anyone trying to stay abreast of the latest findings This book is sure to become a classic and will regularly be updated Phylogeny and Evolution of ABC Transporters Fundamental Aspects of the Mechanism of Action of ABC Transporters Prokaryote ABC Transporters Non Mammalian Transporters Multidrug Transporters ABC Transporters Physiological Roles and Human Disease Full color throughout **Unusual Secretory Pathways: From Bacteria to Man** Karl Kuchler, Anna Rubartelli, Barry Holland, 2013-06-29 This book constitutes the first comprehensive discussion and collection of facts and functions of unconventional secretory pathways some of which are of importance in human disease and pathology The function of ABC transporters in these processes is also discussed This comparison of common aspects and similarities in all living cells from bacteria to man is an excellent reference book with textbook character Phase II Conjugation Enzymes and Transport Systems Helmut Sies, Lester Packer, 2005-11-28 This volume on conjugation enzymes and transporters serves to bring together current methods and concepts in an interesting important and rapidly developing field of cell and systems biology Phase II Conjugation Enzymes and Transport Systems focuses on the so called Phase II enzymes of drug metabolism xenobiotics which has important ramifications for endogenous metabolism and nutrition Also included are aspects on Phase III transport systems This volume of Methods in Enzymology presents current knowledge and methodology on glucuronidation sulfation acetylation and transport systems in this field of research Together with the volumes on Quinones and Quinone Enzymes volumes 378 and 382 and on Glutathione Transferases and gamma Glutamyl Transpeptidases volume 401 the state of knowledge on proteomics and metabolomics of many pathways of waste product elimination enzyme protein induction and gene regulation and feedback control is provided This volume will help stimulate future investigations and speed the advance of knowledge in systems biology A laboratory standard for more than 40 years Over 400 volumes strong Also available on ScienceDirect *Transporters as Drug Carriers* Gerhard F. Ecker, Peter Chiba, 2009-09-03 This reference handbook is the first to provide a comprehensive overview systematically characterizing all known transporters involved in drug elimination and resistance Combining recent knowledge on all known classes of drug carriers from microbes to man it begins with a look at human and mammalian transporters This is followed by microbial fungal and parasitic transporters with special attention given to transport across those physiological barriers relevant for drug uptake distribution and excretion As a result this key resource lays the foundations for understanding and investigating the molecular mechanisms for multidrug resistance in cancer cells microbial resistance to antibiotics and pharmacokinetics in general For anyone working with antibiotics and cancer chemotherapeutics as well as being of prime interest to

biochemists and biophysicists *Fundamentals of Protein Structure and Function* Engelbert Buxbaum, 2015-11-27 This book serves as an introduction to protein structure and function Starting with their makeup from simple building blocks called amino acids the 3 dimensional structure of proteins is explained This leads to a discussion how misfolding of proteins causes diseases like cancer various encephalopathies or diabetes Enzymology and modern concepts of enzyme kinetics are then introduced taking into account the physiological pharmacological and medical significance of this often neglected topic This is followed by thorough coverage of h moglobin and myoglobin immunoproteins motor proteins and movement cell cell interactions molecular chaperones and chaperonins transport of proteins to various cell compartments and solute transport across biological membranes Proteins in the laboratory are also covered including a detailed description of the purification and determination of proteins as well as their characterisation for size and shape structure and molecular interactions The book emphasises the link between protein structure physiological function and medical significance This book can be used for graduate and advanced undergraduate classes covering protein structure and function and as an introductory text for researchers in protein biochemistry molecular and cell biology chemistry biophysics biomedicine and related courses About the author Dr Buxbaum is a biochemist with interest in enzymology and protein science He has been working on the biochemistry of membrane transport proteins for nearly thirty years and has taught courses in biochemistry and biomedicine at several universities *Molecular Chaperones and Cell Signalling* Brian Henderson, A. Graham Pockley, 2005-07-18 This book reviews understanding of the biological roles of extracellular molecular chaperones It provides an overview of the structure and function of molecular chaperones their role in the cellular response to stress and their disposition within the cell It also questions the basic paradigm of molecular chaperone biology that these proteins are first and foremost protein folding molecules Paradigms of protein secretion are reviewed and the evolving concept of proteins such as molecular chaperones as multi functional molecules for which the term moonlighting proteins has been introduced is discussed The role of exogenous molecular chaperones as cell regulators is examined and the physiological and pathophysiological role that molecular chaperones play is described In the final section the potential therapeutic use of molecular chaperones is described and the final chapter asks the question what does the future hold for the extracellular biology of molecular chaperones *Proteins* Robert A. Meyers, 2006-12-25 With three Nobel Laureates contributing to this invaluable collection of high quality articles carefully selected from the highly praised R A Meyer s Encyclopedia these two volumes cover a wide range of topics in protein research Clearly divided into sections on structure modeling expression analysis and others the chapters are designed to aid readers of all levels of expertise Each chapter includes a glossary of the most important keywords a concise summary of the article concerned and comprehensive references for further reading Similarly the uniform structure of the articles makes them very easy to use resulting in a ready reference for molecular and cell biologists biochemists biophysicists and biotechnologists as well as those working in the pharmaceutical and biotechnological
