Hitler and Abductive Logic Ben Novak, 2014-05-01 Adolf Hitler is the greatest mystery of the 20th century and the mystery surrounding him consists of two unanswered questions that have baffled biographers and historians First how did he ever rise to power Second who was he really Hitler had the power to mesmerize crowds as the most dynamic orator of the modern age Yet his power was not in his ideas which he collected from the gutter sheets of Vienna nor was it in his personality his biographers describe him as an unperson and his character as a void and a black hole What then was the source of his power Was he a medium or a magician with paranormal powers as many contemporaries thought Or did he

have a secret or method that has not yet been revealed Ben Novak spent fourteen years searching for the secret of Hitler's political success and his power as a speaker Hitler's most astute contemporary observer Konrad Heiden who wrote the first objective books on Hitler warning that this man was the greatest mass-disturber in world history suggested that Hitler's secret lay in his use of *eine eigentümliche Art von Logik* or a peculiar form of logic Beginning with this clue Novak finds that there is a new form of logic in accordance with Heiden's description and examples that can explain Hitler's phenomenal political success This new form of logic called abduction was discovered by an American philosopher Charles Sanders Peirce 1839-1914 who is rapidly becoming America's most well-known philosopher and logician Abduction is a third form of logic in addition to deduction and induction Unlike the other forms of logic abduction is based on instinct and has a power over emotions Novak argues that Hitler was the first politician to apply the logic of abduction to politics This book provides the first coherent account of Hitler's youth that ties together all the known facts clearly showing the genesis of the strangest and most terrible man of the twentieth century while identifying the power he discovered that allowed him to break out into the world in such a terrifying way

Theories of Scientific Method Robert Nola, Howard Sankey, 2014-12-18 What is it to be scientific Is there such a thing as scientific method And if so how might such methods be justified Robert Nola and Howard Sankey seek to provide answers to these fundamental questions in their exploration of the major recent theories of scientific method Although for many scientists their understanding of method is something they just pick up in the course of being trained Nola and Sankey argue that it is possible to be explicit about what this tacit understanding of method is rather than leave it as some unfathomable mystery They robustly defend the idea that there is such a thing as scientific method and show how this might be legitimated This book begins with the question of what methodology might mean and explores the notions of values rules and principles before investigating how methodologists have sought to show that our scientific methods are rational Part 2 of this book sets out some principles of inductive method and examines its alternatives including abduction IBE and hypothetico-deductivism Part 3 introduces probabilistic modes of reasoning particularly Bayesianism in its various guises and shows how it is able to give an account of many of the values and rules of method Part 4 considers the ideas of philosophers who have proposed distinctive theories of method such as Popper Lakatos Kuhn and Feyerabend and Part 5 continues this theme by considering philosophers who have proposed naturalised theories of method such as Quine Laudan and Rescher This book offers readers a comprehensive introduction to the idea of scientific method and a wide-ranging discussion of how historians of science philosophers of science and scientists have grappled with the question over the last fifty years
