NSU Ro80 - The Complete Story Martin Buckley, 2023-02-14 Launched in 1967 the NSU Ro80 had modern aerodynamic styling a technologically advanced Wankel rotary engine and was voted Car of the Year in 1968 However after the initial positive reception the car developed a reputation for unreliability with problems arising as early as 15 000 miles and many vehicles required a rebuilt engine before 30 000 miles Despite the company resolving these reliability issues in both existing and new vehicles and offering a generous warranty the damage to the car's reputation was done The NSU Ro80 is the most celebrated motoring lost cause of the second half of the twentieth century outranking the likes of the Edsel and the DeLorean because unlike those statements of misplaced optimism and ego it was a good car Not just good the NSU Ro80 is one of the great saloons Launched in September 1967 the Ro80 was an all new four door five seater from a West German company that post war had never made anything other than economy runabouts motorcycles and mopeds That alone should have been enough of a risk but this was also the world's first purpose built Wankel engined family saloon This compact refined and elegantly simple power unit was the first really new concept in the realm of internal combustion engines to achieve mass production for ninety years A car like the Ro80 could only really have come from Germany where there was a passion for research and a pride in engineering not found elsewhere in Europe With front wheel drive superb power steering and four wheel disc brakes the car had top handling and driver appeal Quite simply it was a masterpiece considered by many to be the finest vehicle of its type in the world But with one fatal flaw its engine With over 300 archive photographs drawings and diagrams this book tells the story of the NSU Powertrain Michael Trzesniowski, 2023-03-02 In this book the reader

learns the essential differences to the passenger car through the analysis divided according to assemblies This gives him the tools to apply the detailed knowledge acquired to the design and development of competition vehicles In the case of internal combustion engines the focus is on performance enhancing measures for racing vehicles From the choice of the number of cylinders to the intake system to the exhaust system the lever can be applied to every assembly For electric drives the traction battery cell selection cooling and operating strategy are considered in more detail Energy recovery systems are an interesting enhancement for hybrid vehicles and all electric powertrains especially in strategic considerations for racing Finally gearboxes are needed independently of the drive source albeit matched to it so that the full potential can be exploited The detailed in depth presentation makes this work just as suitable for the interested motorsport enthusiast as it is for the engineer in the field who is addressing the issues surrounding race car powertrains The formula material is prepared in such a way that the book can also be used as a reference work
