Astronomy with your Personal Computer Peter Duffett-Smith, 1990-06-29 The first edition of this very successful book was a winner of the Astronomical Society of the Pacific's Astronomy Book of the Year award in 1986 The popularity of the book's programs is based on the ease with which the amateur astronomer can perform calculations on a personal computer The routines are not specific to any make of computer and are user oriented in that they utilize a simple version of the BASIC programming language and require only a broad understanding of any particular problem Seven new subroutines in this new edition can be linked in any combination with the existing twenty six Since the programs themselves take care of details they can be used for example to calculate the time of rising of any of the planets in any part of the world at any time in the future or past or they may be used to find the circumference of the next solar eclipse

visible from a particular place In fact almost every problem likely to be encountered by the amateur astronomer can be solved by a suitable combination of the routines given in this book Peter Duffett Smith is the author of another popular astronomy book *Astronomy with Your Calculator* 3rd Edition also published by Cambridge University Press

Astronomy with a Home Computer Neale Monks, 2006-03-30 Here is a one volume guide to just about everything computer related for amateur astronomers Today s amateur astronomy is inextricably linked to personal computers Computer controlled go to telescopes are inexpensive CCD and webcam imaging make intensive use of the technology for capturing and processing images Planetarium software provides information and an easy interface for telescopes The Internet offers links to other astronomers information and software The list goes on and on Find out here how to choose the best planetarium program are commercial versions really better than freeware Learn how to optimise a go to telescope or connect it to a lap top Discover how to choose the best webcam and use it with your telescope Create a mosaic of the Moon or high resolution images of the planets *Astronomy with a Home Computer* is designed for every amateur astronomer who owns a home computer whether it is running Microsoft Windows Mac O S or Linux It doesn t matter what kind of telescope you own either a small refractor is just as useful as a big go to SCT for most of the projects in this book

The Personal Computer Past, Present and Future 1975/2021 Peter Farwell, 2021-08-31 This book relates the story of the Personal Computer from 1975 to 2021 It discusses the spectacular growth in sales over the first 36 years to 2011 and the techniques used by entrepreneurs to make this happen The next six years to 2017 are years of precipitous decline in Personal computer sales We explain the causes of this decline We conclude by an examination of PC sales to 2021 when they enjoyed a resurgence and speculate on why this has been happening

Encyclopedia of Computer Science and Technology Harry Henderson, 2009 Presents an illustrated A Z encyclopedia containing approximately 600 entries on computer and technology related topics

Astronavigation K.A. Zischka, 2017-05-30 This book acts as a manual for the ancient methods of navigating by the stars which continue to provide the sailor or pilot with a timeless means of determining location Despite the prevalence of GPS a comprehensive set of formulae that can be evaluated on any inexpensive scientific calculator in the event of a catastrophic software or systems failure is a vital failsafe It also serves as a living link to centuries of explorers from centuries past Beginning with the basics of positional astronomy this guide moves on to the more complex math necessary to understand the ephemerides tables showing the future positions of the stars and planets These astronomical almanacs were the satellite navigation of their day The objective of this book is twofold to provide the reader with a concise comprehensible manual on positional astronomy as it applies to astro navigation and to furnish the concise algorithms for finding the position of the Sun and various navigational stars at any given instant In a world where too many mariners and aeronauts rely solely on technology and are vulnerable to solar flares electrical issues and the like this

knowledge can be a life saving backup not to mention a fascinating study in its own rights Included is an exact mathematical way to determine your position in the air or on the sea far more quickly and accurately than by using the old celestial navigational method without even needing to know or understand the underlying mathematics There is even a section that teaches how to measure the azimuth of a star using an analog wrist watch so if a sextant gets damaged locating position is still possible This book offers mathematicians and adventurers a way to determine position when the skies go dark The U S Navy has recently realized that their electronic navigation systems are vulnerable to cyberattack and as a result has instructed the Naval Academy to begin teaching celestial navigation again
