Survive and Thrive Wendy Crone, 2022-05-31 The experience of an untenured faculty member is highly dependent on the quality of the mentoring they receive This mentoring may come from a number of different sources and the concept of developing a constellation of mentors is highly recommended but a mentoring relationship that is guided by the mentee's needs will be the most productive Often however the mentee does not know their own needs what questions to ask and what topics they should discuss with a mentor This book provides a guide to the mentoring process for untenured faculty Perspectives are provided and questions posed on topics ranging from establishing scholarly expertise and developing professional networks to personal health and balancing responsibilities The questions posed are not intended for the mentee to answer in isolation rather a junior faculty member should approach these questions throughout their untenured years with the help of their mentors *Survive and Thrive A Guide for Untenured Faculty* will help to facilitate the mentoring process and lead junior faculty to a path where they can move beyond just surviving and truly thrive in their position Table of Contents Tough

Questions About Why You Are Here Joining Your Department and Discipline Establishing Expertise Developing Networks Relationships and Mentoring Activities Getting Support and Evaluating Your Personal Health Planning for the Future Conclusion Laboratory Epistemologies Jenny Boulboulé,2024-10-11 In Laboratory Epistemologies A Hands On

Perspective Jenny Boulboul examines the significance of hands on experiences in contemporary life sciences laboratories Addressing the relationship between contemplation and manipulation in epistemology Boulboul combines participant observations in molecular genetics labs and microbiological cleanrooms with a longue dur e study of the history and philosophy of science She radically rereads Descartes s key epistemological text *Meditations on First Philosophy* reframing the philosopher as a hands on knowledge maker With this reading Boulboul subverts the pervasive modern conception of the disembodied knower and puts the hands on experimenter at the heart of life sciences research In so doing she contributes a theoretical model for understanding how life processes on cellular and molecular levels are manually produced in today s techno scientific spaces By reassessing the Cartesian legacy and arguing that epistemology should be grounded in the standpoint of a hands on practitioner Boulboul offers the philosophical and historical foundation to understand and study contemporary life sciences research as multisensory embodied practices Career Opportunities in Clinical Drug Research

Rebecca Jane Anderson,2010 It is simply amazing to me that so many of my industry coworkers stumbled upon their careers in clinical research like I did merely by chance In most cases once those opportunities were presented to us we found fulfilling and successful careers Undoubtedly other eager job seekers would also find this career path attractive If only someone would tell them about it **Statistics at the Bench** Martina Bremer,Rebecca W. Research Wendy C. Crone,2022-06-01 Undergraduate and first year graduate students engaging in engineering research need more than technical skills and tools to be successful From finding a research position and funding to getting the mentoring needed to be successful while conducting research responsibly to learning how to do the other aspects of research associated with project management and communication this book provides novice researchers with the guidance they need to begin developing mastery Awareness and deeper understanding of the broader context of research reduces barriers to success increases capacity to contribute to a research team and enhances ability to work both independently and collaboratively Being prepared for what s to come and knowing the questions to ask along the way allows those entering researcher to become more comfortable engaging with not only the research itself but also their colleagues and mentors

Scientific Integrity, 3rd Edition , Emerging Model Organisms ,2009 Until recently a small number of model organisms has been the focus of most research in molecular cellular and developmental biology But in the last few years due

in part to increased interest in questions of evolution technical advances in selectively altering gene expression patterns and reduced costs of genome sequencing the range of organisms used for research is greatly expanding Emerging Model Organisms Volume 1 introduces the reader to this new generation of model organisms providing a diverse catalog of potential species useful for extending research in new directions In this volume leading experts provide chapters on 23 emerging model systems ranging from bat and butterfly to cave fish and choanoflagellates cricket and finch to quail snail and tomato Subsequent releases of the Emerging Model Orgaisms series already in preparation will focus on additional species Richard Behringer Rob Krumlauf Sandy Johnson Mike Levine Nipam Patel Neelima Sinha Publisher
