The M2 Macrophage Tamás Röszer,2020-08-03 Macrophages are core components of the innate immune system Once activated they may have either pro or anti inflammatory effects that include pathogen killing safe disposal of apoptotic cells or tissue renewal The activation state of macrophages is conceptualized by the so called M1 M2 model of polarization M2 macrophages are not simply antagonists of M1 macrophages rather they represent a network of tissue resident macrophages with roles in tissue development and organ homeostasis M2 macrophages govern functions at the interfaces of immunity tissue development and turnover metabolism and endocrine signaling Dysfunction in M2 macrophages can ruin the healthy interplay between the immune system and metabolic processes and lead to diseases such as insulin resistance metabolic syndrome and type 1 and 2 diabetes mellitus Furthermore M2 macrophages are essential for healthy tissue development and immunological self tolerance Worryingly these functions of M2 macrophages can also be disrupted resulting in tumor growth and autoimmunity This book comprehensively discusses the biology of M2 macrophages summarizes the current state of knowledge and highlights key questions that remain unanswered

Cooper,2018-08-07 Immunologists perhaps understandably most often concentrate on the human immune system an anthropocentric focus that has resulted in a dearth of information about the immune function of all other species within the animal kingdom However knowledge of animal immune function could help not only to better understand human immunology but perhaps more importantly it could help to treat and avoid the blights that affect animals which consequently affect humans Take for example the mass death of honeybees in recent years their demise resulting in much less pollination poses a serious threat to numerous crops and thus the food supply There is a similar disappearance of frogs internationally signaling ecological problems among them fungal infections This book aims to fill this void by describing and discussing what is known about non human immunology It covers various major animal phyla its chapters organized in a progression from the simplest unicellular organisms to the most complex vertebrates mammals Chapters are written by experts covering the latest findings and new research being conducted about each phylum Edwin L Cooper is a Distinguished Professor in the Laboratory of Comparative Immunology Department of Neurobiology at UCLA s David Geffen School of Medicine **Lenfadenopatiye**
