Applications of Neural Networks in High Assurance Systems Johann M.Ph. Schumann,Yan Liu,2010-02-28

Applications of Neural Networks in High Assurance Systems is the first book directly addressing a key part of neural network technology methods used to pass the tough verification and validation V V standards required in many safety critical applications The book presents what kinds of evaluation methods have been developed across many sectors and how to pass the tests A new adaptive structure of V V is developed in this book different from the simple six sigma methods usually used for large scale systems and different from the theorem based approach used for simplified component subsystems **City**

Competitiveness and Improving Urban Subsystems: Technologies and Applications Bulu, Melih,2011-10-31 Cities are becoming the wealth producing centers of national economies Increasing the operational efficiency of the city will bring a competitive edge to the whole system Yet many city subsystems cannot work together creating significant problems and inefficiencies City Competitiveness and Improving Urban Subsystems Technologies and Applications uses information science perspectives to improve working subsystems in transportation sewage electricity water communication education health governance and infrastructure since their efficient and synchronized operation is vital for a competitive city This pioneering approach will interest researchers professionals and policymakers in urban economy regional planning and information science disciplines who wish to improve the competitiveness of their cities Computer Safety, Reliability, and Security.

Computational Intelligence Francisco Fernández Vega, Erick Cantú-Paz,2010-01-06 Offering a global snapshot of parallel and distributed computational intelligence today this volume covers ongoing issues as well as recent exploratory work Topics discussed include GPUs Clusters Grids volunteer computing p2p networks and more *Computational Intelligence for Technology Enhanced Learning* Fatos Xhafa, Santi Caballé, Ajith Abraham, Thanasis Daradoumis, Angel A. Juan,2010-03-10 E Learning has become one of the most wide spread ways of distance teaching and learning Technologies such as Web Grid and Mobile and Wireless networks are pushing teaching and learning communities to find new and intelligent ways of using

these technologies to enhance teaching and learning activities Indeed these new technologies can play an important role in increasing the support to teachers and learners to shorten the time to learning and teaching yet it is necessary to use intelligent techniques to take advantage of these new technologies to achieve the desired support to teachers and learners and enhance learners performance in distributed learning environments The chapters of this volume bring advances in using intelligent techniques for technology enhanced learning as well as development of e Learning applications based on such techniques and supported by technology Such intelligent techniques include clustering and classification for personalization of learning intelligent context aware techniques adaptive learning data mining techniques and ontologies in e Learning systems among others Academics scientists software developers teachers and tutors and students interested in e Learning will find this book useful for their academic research and practice activity

Model-Reference Adaptive Control Nhan T. Nguyen, 2018-03-01 This textbook provides readers with a good working knowledge of adaptive control theory through applications It is intended for students beginning masters or doctoral courses and control practitioners wishing to get up to speed in the subject expeditiously Readers are taught a wide variety of adaptive control techniques starting with simple methods and extending step by step to more complex ones Stability proofs are provided for all adaptive control techniques without obfuscating reader understanding with excessive mathematics The book begins with standard model reference adaptive control MRAC for first order second order and multi input multi output systems Treatment of least squares parameter estimation and its extension to MRAC follow helping readers to gain a different perspective on MRAC Function approximation with orthogonal polynomials and neural networks and MRAC using neural networks are also covered Robustness issues connected with MRAC are discussed helping the student to appreciate potential pitfalls of the technique This appreciation is encouraged by drawing parallels between various aspects of robustness and linear time invariant systems wherever relevant Following on from the robustness problems is material covering robust adaptive control including standard methods and detailed exposition of recent advances in particular the author's work on optimal control modification Interesting properties of the new method are illustrated in the design of adaptive systems to meet stability margins This method has been successfully flight tested on research aircraft one of various flight control applications detailed towards the end of the book along with a hybrid adaptive flight control architecture that combines direct MRAC with least squares indirect adaptive control In addition to the applications understanding is encouraged by the use of end of chapter exercises and associated MATLAB files Readers will need no more than the standard mathematics for basic control theory such as differential equations and matrix algebra the book covers the foundations of MRAC and the necessary mathematical preliminaries

Advances in Multi-Objective Nature Inspired Computing Carlos Coello Coello, Clarisse Dhaenens, Laetitia Jourdan, 2010-02-04 The purpose of this book is to collect contributions that deal with the use of nature inspired metaheuristics for solving multi objective combinatorial optimization problems Such a collection intends to provide an

overview of the state of the art developments in this field with the aim of motivating more researchers in operations research engineering and computer science to do research in this area As such this book is expected to become a valuable reference for those wishing to do research on the use of nature inspired metaheuristics for solving multi objective combinatorial optimization problems

Agent and Multi-agent Technology for Internet and Enterprise Systems Anne Hakansson,Ronald Hartung,Ngoc Thanh Nguyen,2010-06-17 Research in multi agent systems offers a promising technology for problems with networks online trading and negotiations but also social structures and communication This is a book on agent and multi agent technology for internet and enterprise systems The book is a pioneer in the combination of the fields and is based on the concept of developing a platform to share ideas and presents research in technology in the field and application to real problems The chapters range over both applications illustrating the possible uses of agents in an enterprise domain and design and analytic methods needed to provide the solid foundation required for practical systems

COMPUTATIONAL INTELLIGENCE IN COMPLEX DECISION MAKING SYSTEMS Ruan Da,2010-06-01 In recent years there has been a growing interest in the need for designing intelligent systems to address complex decision systems One of the most challenging issues for the intelligent system is to effectively handle real world uncertainties that cannot be eliminated These uncertainties include various types of information that are incomplete imprecise fragmentary not fully reliable vague contradictory deficient and overloading The uncertainties result in a lack of the full and precise knowledge of the decision system including the determining and selection of evaluation criteria alternatives weights assignment scores and the final integrated decision result Computational intelligent techniques including fuzzy logic neural networks and genetic algorithms etc which are complimentary to the existing traditional techniques have shown great potential to solve these demanding real world decision problems that exist in uncertain and unpredictable environments These technologies have formed the foundation for intelligent systems
