MAT350: Applied Linear Algebra

Alexander Ibarra

6/2/2024

Problem 1

Develop a system of linear equations for the network by writing an equation for each router (A, B, C, D, and E). Make sure to write your final answer as $Ax=b$ where A is the 5×5 coefficient matrix, x is the 5×1 vector of unknowns, and b is a 5×1 vector of constants.

Solution:

For each router we will write an equation for all of the incoming connections on one side, and the outgoing connections on the other side, then rewrite so that all of the variables are on one side and the constants are on the other side.

Router A has 100 Mbps incoming, and x_1 and x_2 outgoing. $x_1 + x_2 = 100$

Router B has x_1 and x_2 incoming, and x_3 and x_4 outgoing. $x_3 + x_4 = x_1 + x_2$. Simplified for the matrix we get $-x_1 - x_2 + x_3 + x_4 = 0$

Router C has 50 Mbps incoming and x_2 incoming, then x_3 and x_5 outgoing. $x_3 + x_5 = x_2 + 50$ Simplified we get $-x_2 + x_3 + x_5 = 50$

Router D has x_3 and x_5 incoming, then x_4 and 120 Mbps outgoing. $x_4 + 120 = x_3 + x_5$ Simplified we get $x_3 - x_4 - x_5 = -120$

Router E has x_3, x_4 , and x_5 incoming, then x_4 outgoing. $x_4 = x_3 + x_4 + x_5$. Simplified we get $-x_3 - x_5 + x_4 - x_4 = 0$

The matrix can be formed by using $Ax=b$

$$\begin{bmatrix} 1 & 2 & 0 & 0 & 0 \\ -1 & -1 & 1 & 0 & 1 \\ 0 & -1 & 1 & 0 & 1 \\ 0 & 1 & 0 & -1 & -1 \\ 0 & -1 & -1 & 1 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \\ x_4 \\ x_5 \end{bmatrix} = \begin{bmatrix} 100 \\ 0 \\ 50 \\ -120 \\ 0 \end{bmatrix}$$

Problem 2

Use MATLAB to construct the augmented matrix $[A \ b]$ and then perform row reduction using the `rref()` function. Write out your **reduced matrix** and **identify the free and basic variables of the system**.

Exploring Linear Algebra Crista Arangala, 2019-03-07 Exploring Linear Algebra Labs and Projects with MATLAB is a hands on lab manual that can be used by students and instructors in classrooms every day to guide the exploration of the theory and applications of linear algebra For the most part labs discussed in the book can be used individually or in a sequence Each lab consists of an explanation of material with integrated exercises Some labs are split into multiple subsections and thus exercises are separated by those subsections The exercise sections integrate problems using Mathematica demonstrations an online tool that can be used with a browser with Java capabilities and MATLAB coding This allows students to discover the theory and applications of linear algebra in a meaningful and memorable way Features The book's inquiry based approach promotes student interaction Each chapter contains a project set which consists of application driven projects emphasizing the chapter's materials Adds a project component to any Linear Algebra course Explores many applications to a variety of fields that can promote research projects Employs MATLAB to calculate and explore concepts and theories of linear algebra

Linear Algebra Ward Cheney, David Kincaid, 2012 Ward Cheney and David Kincaid have developed Linear Algebra Theory and Applications Second Edition a multi faceted introductory textbook which was motivated by their desire for a single text that meets the various requirements for differing courses within linear algebra For theoretically oriented students the text guides them as they devise proofs and deal with abstractions by focusing on a comprehensive blend between theory and applications For application oriented science and engineering students it contains numerous exercises that help them focus on understanding and learning not only vector spaces matrices and linear transformations but uses of software tools available for use in applied linear algebra Using a flexible design it is an ideal textbook for instructors who wish to make their own choice regarding what material to emphasize and to accentuate those choices with homework assignments from a large variety of exercises both in the text and online

Advanced Linear Algebra Hugo Woerdeman, 2015-12-23 Advanced Linear Algebra features a student friendly approach to the theory of linear algebra The author's emphasis on vector spaces over general fields with corresponding current applications sets the book apart He focuses on finite fields and complex numbers and discusses matrix algebra over these fields The text then proceeds to cover vector spaces in depth Also discussed are standard topics in linear algebra including linear transformations Jordan canonical form inner product spaces spectral theory and as supplementary topics dual spaces quotient spaces and tensor products Written in clear and concise language the text sticks to the development of linear algebra without excessively addressing applications A unique chapter on How to Use Linear Algebra is offered after the theory is presented In addition students are given pointers on how to start a research project The proofs are clear and complete and the exercises are well designed In addition full solutions are included for almost all exercises
