stance when more conventional means fail to explain or even explore the intricacies of a text. It argues that scientific discourse can also be analysed through the prism of literary theories since all texts are governed in varying measure by the unity of contexts that characterize their nature, the process of their creation and their place in the cognitive realm of humanity. This approach will allow the nature and limitations of scientific research to be questioned while opening up more venues to explore scientific creativity that crosses the subject boundaries of science and humanities. Latin American literature offers many examples of the interconnection between literary and scientific discourse. Notwithstanding the often explored relationship between Jorge Luis Borges's literary themes and contemporary scientific discoveries, a more general question should be asked: is the influence of scientific thought a privilege of the select few or is it indeed an all-pervading experience in Latin American literary narrative from late modernism to present day? This book explores the texts that overtly incorporate scientific content or are structured in such a way that immediately reminds the reader of a scientific phenomenon; it will also examine the texts that are presented in such a way that a conventional literary analysis does not help penetrate the many narrative layers that the text comprises. The volume offers cross-disciplinary readings of such authors as Jorge Luis Borges, Gabriel García Márquez, Ernesto Sábato and Gustavo Sainz, to name but a few.
