Bottled Lightning Superbatteries Electric Cars And The New Lithium Economy:

Bottled Lightning Seth Fletcher, 2025-06-25 Lithium batteries may hold the key to an environmentally sustainable oil independent future From electric cars to a smart power grid that can actually store electricity letting us harness the powers of the sun and the wind and use them when we need them lithium a metal half as dense as water found primarily in some of the most uninhabitable places on earth has the potential to set us on a path toward a low carbon energy economy In *Bottled Lightning* the science reporter Seth Fletcher takes us on a fascinating journey from the salt flats of Bolivia to the labs of MIT and Stanford from the turmoil at GM to cutting edge lithium ion battery start ups introducing us to the key players and ideas in an industry with the power to reshape the world Lithium is the thread that ties together many key stories of our time the environmental movement the American auto industry staking its revival on the electrification of cars and trucks the struggle between first world countries in need of natural resources and the impoverished countries where those resources are found and the overwhelming popularity of the portable Internet connected gadgets that are changing the way we communicate With nearly limitless possibilities the promise of lithium offers new hope to a foundering American economy desperately searching for a green tech boom to revive it

Volt Rush Henry Sanderson, 2022-07-28 A remarkably hopeful and useful book The climate crisis leaves us no choice but to build a new world and as Sanderson makes clear we are capable of making it a better one than the dirty and dangerous planet we've come to take for granted Bill McKibben Observer book of the week We depend on a handful of metals and rare earths to power our phones and computers Increasingly we rely on them to power our cars and our homes Whoever controls these finite commodities will become rich beyond imagining Sanderson journeys to meet the characters companies and nations scrambling for the new resources linking remote mines in the Congo and Chile's Atacama Desert to giant Chinese battery factories shadowy commodity traders secretive billionaires a new generation of scientists attempting to solve the dilemma of a greener world

Hybrid and Electric Cars Louise I. Gerdes, 2014-08-08 The Pew Group provides one of the thirteen essays here plainly stating that hybrid and electric cars make the United States more competitive so why don't we see these cars everywhere Readers will explore this issue across several topics relating to these cars including what to do with mileage taxes whether the government should subsidize the cars and why China does not embrace these cars

Age of Auto Electric Matthew N. Eisler, 2022-12-06 The electric vehicle revival reflects negotiations between public policy which promotes clean fuel efficient vehicles and the auto industry which promotes high performance vehicles Electric cars were once as numerous as internal combustion engine cars before all but vanishing from American roads around World War I Now we are in the midst of an electric vehicle revival and the goal for a sustainable car seems to be within reach In *Age of Auto Electric* Matthew N Eisler shows that the halting development of the electric car in the intervening decades was a consequence of tensions between environmental energy and economic policy imperatives that informed a protracted reappraisal of the automobile system These factors drove the electric vehicle revival argues Eisler

hastening automaking's transformation into a science based industry in the process Challenging the common assumption that the electric vehicle revival is due to the development of better batteries Age of Auto Electric instead focuses on changing environmental and socioeconomic conditions energy and environmental policies systems of energy conversion and industrial production and innovation practices that affected the prevalence and popularity of electric vehicles in recent decades Eisler describes a world in transition from legacy to alternative energy conversion systems and the promises compromises new problems and unintended consequences that enterprise has entailed Hybrid and Electric Vehicles L. E.

Electrical Conquest W. Bernard Carlson,Erik M Conway,2024-01-08 This book drawing on fresh scholarship investigates electrification in new places and across different time periods While much of our understanding of electrification as a historical process is based on the seminal work done by Thomas P Hughes in Networks of Power 1983 the scholars in this volume expand and revise Hughes systems approach to suggest that electrification is a heterogeneous and contingent process Moreover the contributors suggest that the conquest of the world by electricity remains incomplete despite more than a century elapsing Above all though this book provides context for thinking about what lies ahead as humans continue their conquest of the earth through electricity As we become increasingly dependent on electricity to power our lights heat and cool our homes turn the wheels of industry and keep our information systems humming so we are ever more vulnerable when the grid runs into trouble Chapter Surveying the Landscape The Oil Industry and Alternative Energy in the 1970s is available open access under a Creative Commons Attribution 4.0 International License via link springer.com Atlas of Material Worlds Matthew Seibert,2021-08-17 Atlas of Material Worlds is a highly designed narrative atlas illustrating the agency of nonliving materials with unique ubiquitous and often hidden influence on our daily lives Employing new materialism as a jumping off point it examines the increasingly blurry lines between the organic and inorganic engaging the following questions What roles do nonliving materials play Might a closer examination of those roles reveal an undeniable agency we have long overlooked or disregarded If so does this material agency change our understanding of the social structures ecologies economies cosmologies technologies and landscapes that surround us And perhaps most importantly why does material agency matter This is the story of the world's driest nonpolar desert pink flamingos and cerulean blue

lithium ponds industrial shipping logistics pudding like jiggling substrates and monuments of mud galactic bodies radioactive sheep and the yellowcake of uranium Put simply this book dares readers to see the world anew from material up Atlas of Material Worlds offers this new relationship to our host environment in a time of mounting crises accelerating climate change ballooning socioeconomic inequality and rising toxic nationalism uniquely telling materialist stories for practitioners and students in landscape architecture and other built environment disciplines **The Wide Lens** Ron Adner, 2012-03-01

How can great companies do everything right identify real customer needs deliver excellent innovations beat their competitors to market and still fail The sad truth is that many companies fail because they focus too intensely on their own innovations and then neglect the innovation ecosystems on which their success depends In our increasingly interdependent world winning requires more than just delivering on your own promises It means ensuring that a host of partners some visible some hidden deliver on their promises too In The Wide Lens innovation expert Ron Adner draws on over a decade of research and field testing to take you on far ranging journeys from Kenya to California from transport to telecommunications to reveal the hidden structure of success in a world of interdependence A riveting study that offers a new perspective on triumphs like Amazon's e book strategy and Apple's path to market dominance monumental failures like Michelin with run flat tires and Pfizer with inhalable insulin and still unresolved issues like electric cars and electronic health records The Wide Lens offers a powerful new set of frameworks and tools that will multiply your odds of innovation success The Wide Lens will change the way you see the way you think and the way you win **The Physics of Everyday Things** James

Kakalios, 2018-05-15 Physics professor bestselling author and dynamic storyteller James Kakalios reveals the mind bending science behind the seemingly basic things that keep our daily lives running from our smart phones and digital clouds to x ray machines and hybrid vehicles Most of us are clueless when it comes to the physics that makes our modern world so convenient What's the simple science behind motion sensors touch screens and toasters How do we glide through tolls using an E Z Pass or find our way to new places using GPS In The Physics of Everyday Things James Kakalios takes us on an amazing journey into the subatomic marvels that underlie so much of what we use and take for granted Breaking down the world of things into a single day Kakalios engages our curiosity about how our refrigerators keep food cool how a plane manages to remain airborne and how our wrist fitness monitors keep track of our steps Each explanation is coupled with a story revealing the interplay of the astonishing invisible forces that surround us Through this narrative physics The Physics of Everyday Things demonstrates that far from the abstractions conjured by terms like the Higgs Boson black holes and gravity waves sophisticated science is also quite practical With his signature clarity and inventiveness Kakalios ignites our imaginations and enthralls us with the principles that make up our lives *High Voltage* Jim Motavalli, 2011-11-08 A behind the scenes look at the robustly competitive race to dominate the market for electric cars the larger than life moguls behind them and the changes that are transforming the auto industry In the 1980s it was unimaginable that the home computer

would become as common and easy to use as a toaster Today plug in charging stations and smart grids seem like something still far off in the future But by 2020 the auto industry will look very different from today s field of troubled auto giants The combination of technological breakthroughs and charging networks driven by global warming and peak oil makes it clear that revolutionary change in the auto industry is happening right now In High Voltage Jim Motavalli captures this period of unprecedented change documenting the evolution from internal combustion engines to electric power Driven by the auto world s ambitious and sometimes outlandish personalities the book chronicles the race to dominate the market focusing on big players like Tesla and Fisker as well as a tiny start up and a battery supplier Flashing forward to the changes we ll see in the coming years High Voltage shows a not so distant future where we will live on a smart grid our cars fueling that is charging while we shop or sleep The ramifications of these changes will be on a grander scale than most of us ever imagined altering foreign policy reducing trade deficits and perhaps even ending global warming
