Experimentology Michael C. Frank, Mika Braginsky, Julie Cachia, Nicholas A. Coles, Tom E. Hardwicke, 2025-07-01 An engaging research methods text integrating a classic approach to conducting experiments in psychology with open science practices and values How does a researcher run a high quality psychology experiment What time tested methods should be used and how can more robust and accurate results be achieved A dynamic collaboration between groundbreaking cognitive scientist Michael Frank and a diverse cohort of researchers innovating in the field Mika Braginsky Julie Cachia Nicholas Coles Tom Hardwicke Robert Hawkins Maya Mathur and Rondeline Williams *Experimentology* introduces the art of the modern psychological experiment with an emphasis on open science values of accessibility and transparency *Experimentology* follows the timeline of an experiment with sections covering basic foundations planning execution data gathering and analysis and reporting Narrative examples from a range of subdisciplines including cognitive developmental and social psychology model each component and account for the pitfalls that can undermine the reliability validity and replicability of results Through an embrace of open science strategies such as data sharing and preregistration *Experimentology* shows how the challenges of the replication crisis can be met constructively and collaboratively Written for a global audience *Experimentology* updates a classic research methods textbook with a new focus on ethics and the benefits of open science

Novel Applications of Bayesian and Other Models in Translational Neuroscience Reza Rastmanesh , Jacob Raber ,Edward W. Hsu ,Benjamin R. Pittman-Polletta, 2024-05-06 It has been proposed that the brain works in a Bayesian manner and based on the free energy principle the brain s main function is to reduce environmental uncertainty this is a proposed model as a universal principle governing adaptive brain function and structure There are many pathophysiological and clinical observations that can be easily explained by predictive Bayesian brain models However the novel applications of Bayesian models in translational neuroscience has been understudied and underreported For example variational Bayesian mixed effects inference has been successfully tested for classification studies A multi task Bayesian compressive sensing approach to simultaneously estimate the full posterior of the CSA ODF and diffusion weighted volumes from multi shell HARDI acquisitions has been recently publishe

A Theory of Everyone Michael Muthukrishna, 2025-02-04 A blueprint for a better future that offers a unified theory of human behavior culture and society Playing on the phrase a theory of everything from physics Michael Muthukrishna s ambitious original and deeply hopeful book *A Theory of Everyone* draws on the most recent research from across the sciences humanities and the emerging field of cultural evolution to paint a panoramic picture of who we are and what exactly makes human beings different from all other forms of life on the planet Muthukrishna argues that it is our unique ability to create culture a shared body of knowledge skills and experience passed on from generation to generation that has enabled our current dominance But it is only by understanding and applying the laws of life the need for energy innovation cooperation and evolution that we can solve the practical and existential challenges we face as a species A

Theory of Everyone attempts to provide solutions for the most pressing problems of our collective future such as polarization inequality the great stagnation in productivity and the energy crisis Casting a bold and wide net Muthukrishna's book is a must read for anyone interested in a better future for ourselves and for generations to come The Making and Breaking of Classification Models in Linguistics Jane Klavan, 2024-06-04 The book provides a methodological blueprint for the study of constructional alternations using corpus linguistic methods in combination with different types of experimental data The book looks at a case study from Estonian This morphologically rich language is typologically different from Indo European languages such as English Corpus based studies allow us to detect patterns in the data and determine what is typical in the language Experiments are needed to determine the upper and lower limits of human classification behaviour They give us an idea of what is possible in a language and show how human classification behaviour is susceptible to more variation than corpus based models lead us to believe Corpora and forced choice data tell us that when we produce language we prefer one construction Acceptability judgement data tell us that when we comprehend language we judge both constructions as acceptable The book makes a theoretical contribution to the what why and how of constructional alternations

Introduction to Probability, Second Edition Joseph K. Blitzstein, Jessica Hwang, 2019-02-08 Developed from celebrated Harvard statistics lectures Introduction to Probability provides essential language and tools for understanding statistics randomness and uncertainty The book explores a wide variety of applications and examples ranging from coincidences and paradoxes to Google PageRank and Markov chain Monte Carlo MCMC Additional application areas explored include genetics medicine computer science and information theory The authors present the material in an accessible style and motivate concepts using real world examples Throughout they use stories to uncover connections between the fundamental distributions in statistics and conditioning to reduce complicated problems to manageable pieces The book includes many intuitive explanations diagrams and practice problems Each chapter ends with a section showing how to perform relevant simulations and calculations in R a free statistical software environment The second edition adds many new examples exercises and explanations to deepen understanding of the ideas clarify subtle concepts and respond to feedback from many students and readers New supplementary online resources have been developed including animations and interactive visualizations and the book has been updated to dovetail with these resources Supplementary material is available on Joseph Blitzstein's website www.stat110.net The supplements include Solutions to selected exercises Additional practice problems Handouts including review material and sample exams Animations and interactive visualizations created in connection with the edX online version of Stat 110 Links to lecture videos available on iTunes U and YouTube There is also a complete instructor's solutions manual available to instructors who require the book for a course **Statistics by Simulation** Carsten F. Dormann, Aaron M. Ellison, 2025-06-03 An accessible guide to understanding statistics using simulations with examples from a range of scientific disciplines Real world challenges such as small sample sizes skewed

distributions of data biased sampling designs and more predictors than data points are pushing the limits of classical statistical analysis This textbook provides a new tool for the statistical toolkit data simulations It shows that using simulation and data generating models is an excellent way to validate statistical reasoning and to augment study design and statistical analysis with planning and visualization Although data simulations are not new to professional statisticians Statistics by Simulation makes the approach accessible to a broader audience with examples from many fields It introduces the reasoning behind data simulation and then shows how to apply it in planning experiments or observational studies developing analytical workflows deploying model diagnostics and developing new indices and statistical methods Covers all steps of statistical practice from planning projects to post hoc analysis and model checking Provides examples from disciplines including sociology psychology ecology economics physics and medicine Includes R code for all examples with data and code freely available online Offers bullet point outlines and summaries of each chapter Minimizes the use of jargon and requires only basic statistical background and skills

Children's Exercise Physiology Filipe Manuel Clemente, Luca Paolo Ardigo, Wook Song, Matthieu E. M. Lenoir, Luis Paulo Rodrigues, Hermundur Sigmundsson, 2020-06-22

Bayesian Hierarchical Models Peter D. Congdon, 2019-09-16 An intermediate level treatment of Bayesian hierarchical models and their applications this book demonstrates the advantages of a Bayesian approach to data sets involving inferences for collections of related units or variables and in methods where parameters can be treated as random collections Through illustrative data analysis and attention to statistical computing this book facilitates practical implementation of Bayesian hierarchical methods The new edition is a revision of the book Applied Bayesian Hierarchical Methods It maintains a focus on applied modelling and data analysis but now using entirely R based Bayesian computing options It has been updated with a new chapter on regression for causal effects and one on computing options and strategies This latter chapter is particularly important due to recent advances in Bayesian computing and estimation including the development of rjags and rstan It also features updates throughout with new examples The examples exploit and illustrate the broader advantages of the R computing environment while allowing readers to explore alternative likelihood assumptions regression structures and assumptions on prior densities Features Provides a comprehensive and accessible overview of applied Bayesian hierarchical modelling Includes many real data examples to illustrate different modelling topics R code based on rjags jagsUI R2OpenBUGS and rstan is integrated into the book emphasizing implementation Software options and coding principles are introduced in new chapter on computing Programs and data sets available on the book's website

Statistical Rethinking Richard McElreath, 2018-01-03 Statistical Rethinking A Bayesian Course with Examples in R and Stan builds readers knowledge of and confidence in statistical modeling Reflecting the need for even minor programming in today's model based statistics the book pushes readers to perform step by step calculations that are usually automated This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work The text

presents generalized linear multilevel models from a Bayesian perspective relying on a simple logical interpretation of Bayesian probability and maximum entropy It covers from the basics of regression to multilevel models The author also discusses measurement error missing data and Gaussian process models for spatial and network autocorrelation By using complete R code examples throughout this book provides a practical foundation for performing statistical inference Designed for both PhD students and seasoned professionals in the natural and social sciences it prepares them for more advanced or specialized statistical modeling Web Resource The book is accompanied by an R package rethinking that is available on the author s website and GitHub The two core functions map and map2stan of this package allow a variety of statistical models to be constructed from standard model formulas

Bayesian Data Analysis, Second Edition Andrew Gelman, John B. Carlin, Hal S. Stern, Donald B. Rubin, 2003-07-29 Incorporating new and updated information this second edition of THE bestselling text in Bayesian data analysis continues to emphasize practice over theory describing how to conceptualize perform and critique statistical analyses from a Bayesian perspective Its world class authors provide guidance on all aspects of Bayesian data analysis and include examples of real statistical analyses based on their own research that demonstrate how to solve complicated problems Changes in the new edition include Stronger focus on MCMC Revision of the computational advice in Part III New chapters on nonlinear models and decision analysis Several additional applied examples from the authors recent research Additional chapters on current models for Bayesian data analysis such as nonlinear models generalized linear mixed models and more Reorganization of chapters 6 and 7 on model checking and data collection Bayesian computation is currently at a stage where there are many reasonable ways to compute any given posterior distribution However the best approach is not always clear ahead of time Reflecting this the new edition offers a more pluralistic presentation giving advice on performing computations from many perspectives while making clear the importance of being aware that there are different ways to implement any given iterative simulation computation The new approach additional examples and updated information make Bayesian Data Analysis an excellent introductory text and a reference that working scientists will use throughout their professional life
