ECG Based Analysis of the Ventricular Repolarisation in the Human Heart Baas, Tobias, 2012-08-06 ECG recordings provide diagnostic relevant information on the de and repolarisation sequences of the heart A modification of the repolarisation sequence is assumed to cause Torsades de Pointes Especially drug induced effects on the repolarisation processes are in focus since some non cardiac drugs have been associated with sudden cardiac death in the 1990s The analysis of the ventricular repolarisation using a set of parameters depicting the morphology of the T wave is introduced in this work Therefore new methods of fully automatic patient specific QRS detection beat classification and precise T wave delineation are presented Using these methods medical studies are investigated regarding the modification of the T wave by different compounds Also the impact of the heart rate on the morphology of the T wave is part of this research The reliable identification of ventricular ectopic beats allows an analysis of the influence of these beats on subsequent heart beats It turned out that the morphology of subsequent heart beats can significantly be changed This might give new information on the proarrhythmical risk of ventricular ectopic beats
